I made a little program for you modders out there. This will allow you to select the people you want for bot drop-offs.

You can add your custom presets for soldier's and everything, of course.

You can have this thing unload 15000 soldier's if you want, it will go all day.

Its not pretty yet, ill add graphics and Vehicle/Powerup drop-offs tommorrow. This is just a little taste.

If you have trouble running the program, you most likely dont have the VB 6.0 runtimes.

You kidding? Those Txt scripts are a pain in the ass. You have to do the math for 10 characters and timing, uhg, screw that. Ill use my gen thank you very much.

Don't the chinooks only stay around for a certain amount of time anyways? So if you add a ton there gonna be coming out pretty fast which would look odd. And they really don't take long unless your doing something accentric. One annoying thing is when your trying to get several bots to parachute from something.

btw, did you ever get that tutorial on renhelp? I haven't seen it.

If you create a cinematic you can make anything do whatever you want for however you want. So if you wanted the helicopter to stay there for 120 frames, it'd be nice and quick, or you could make it stay there forever, cinematic scripts are amazing in regard to what you can do with them. It'd be awesome if you expand on the program to do all the cinematic scripting by punching in the important numbers, using animation files you have.

It set the crafts time by how long it needs. Its completely like SP.

Ill be adding parachute support aswell, it takes out human error.

I uploaded it, and Leaubi hasnt had the time to link it. He said he was going to make me a Moderator panel so i can do that stuff for myself.

Oblivion maybe you could make the rope disappear when the transport heli gets destroyed because the rope would hang in midair and not go out with the heli

I cant really control that, All im doing is matchign the same logic that the SP scripts used, and that is about the range of it.

I know i said this would be done but the Parachutes are kicking my ass.

what about another different script that would allow a player to spawn from the heli like in "The Scorpion Hunter" level?

Subject: Re: Script Generator

[View Forum Message](#) <> [Reply to Message](#)

That is simply a cinematic effect, it takes control of the camera at -0, meaning that its First thing, the character doesnt spawn until -1. So what is really happening is that it just drops a havoc, the camer watches him drop from about chest level, and then kills havoc, and allows you to finish your spawn sequence.

I can incorperate scripting help for this, but you would have to make your own w3d files to control everything. I will be making an extensive tutorial on Advanced Cinematic Techniques.

have you managed to get bots killing players using this tool with SSAOW running?

[View Forum Message](#) <> [Reply to Message](#)

As far as I know no one has used this for SSAOW before. You could try though.

Ive tried plenty trying to get bots working properly whilst running SSAOW, it doesn't work. When a bot kills a player it crashes the server because SSAOW thinks that the bots are real players.

no you can, you just can't run ssaow...

johnwill's scripts.dll is different.
