havent played islands in years...but if i recall it uses grid settings.

theres a caustic_grid.tga that might of been used for it.

someone else may know more on this?

I have all the textures, to me it looks like the base water texture with a transparent caustic_grid.tga texture over it. If anyone knows how to do this please post.

I'm not sure if this can help you, but those two DDS files change the water from blue into pacific green on Islands.

```
File Attachments
1) water.zip, downloaded 92 times
```

No, not really.

Ok, my question is now, how do i apply two textures, one on top of the other, in one material, and have the top one semi transparent.

I know how to do that but the map im making is using the smae texture set as islands and i want
the water to look the same.

Extract the tunnels mesh from the Islands mix, then load it in wdump. Look under
CHUNK_MESH->W3D_CHUNK VERTEX MATERIALS.
