I remember reading a similiar problem here but I can't find it under the search function. This has happened to me before, and to my friend and I thought I knew how to fix it but that was not the case

ok, ss of the problem:

Upload photos with ScreenDump.NeT

I remember reading that a font change in stylemgr.ini caused the problem, but I got a friend to send me his, overwrote, same problem   I also didn't install any CP'S or anything, was just playing ingame, died, respawned, bam, text problem. The text is now lighter in color and grainer, and almost makes the game unplayable so I would like to get this fixed ASAP.

Thannks for the help,
trooprm02

If your having the same problem ingame, go ingame and use ~ or F8 and type "Screen_UV_Bias" That should fix the problem

Wow, easy fix.

What causes that problem?

When I loaded up ren 1 time, it just happened, I hear its because my font has changed.

Anyway, it fixed a long problem too, on my old laptop which installed the text like that and found no solution, until now!

PS, what does that command do?

Thanks a bunch
