Posted by [jnz](#) on Mon, 28 Aug 2006 22:37:38 GMT
[View Forum Message](#) <> [Reply to Message](#)

i am going to post any updates here, i have 1.0 out but to break a promise it has not got a ladder built in yet.

i have added:

more memory leaks cleared up;
a dialog to send commands to FDS;
a nice little icon to go with it.

download it here: http://www.help-linux.com/stuff/H-L_Bot-1.0.zip

hopefully for 2.0 i am going to have:

RG server;
ladders;
more commands;
dynamic custom map loading.

i am going to rename it soon as my help-linux site is going down, any suggestions would be much appreciated.

Quote:This application could not be started, because those is config not correct[/quote]

the config file, "config.cfg" had not been configured correctly.
on fds_path make sure there is no trailing slash.

plugins from brenbot would not work as the way that brenbot talks to them, if i knew how to make them myself i could make mine a little more universal.

if there is features you would like to suggest, i would work to get them in(exept ladder, i am working on that right now).

the bad thing about HL Bot is that Help-Linux.com is going down, although i mite keep it.

[View Forum Message](#) <> [Reply to Message](#)

Quote:HL-Bot made by Daniel Astbury

Hi, thanks for testing this for me.

just put make sure all files in zip are in one folder. edit config.cfg.

fds_ip = The remote ip address FDS listens on eg: 127.0.0.1
fds_port = this is the port FDS listens on eg: 4848
fds_pass = this is your admin password for FDS eg: My_great_password
auto_secs = this is the number of seconds to wait till the next auto announce
Note: if this is set to something other than a number it wil probably crash the bot

edit rules.txt for the command !rules
edit auto.txt for the autoannounce 1 line = an announcement.

if you type in public chat "hi, hey" or "hello" the bot will reply to this.

Thanks to Cat998 for helping me get the UDP socket open.

as of 0.80 there is now plugin support!!! just create a dll with the function:

```
const char * dllparse(char * message)
{
    //do something with message here
}
```

[View Forum Message](#) <> [Reply to Message](#)

does anybody know any plugin tutorials for brenbot? i could make it universal to brenbot

Subject: Re: Official HL bot thread

Posted by [Nightma12](#) on Tue, 29 Aug 2006 18:04:39 GMT

[View Forum Message](#) <> [Reply to Message](#)

you would have some issues with that as you would need to be able to compile Perl....

NR plugins would just b a case of calling a few functions lol

Subject: Re: Official HL bot thread

Posted by [jnz](#) on Tue, 29 Aug 2006 19:02:38 GMT

[View Forum Message](#) <> [Reply to Message](#)

it is easy to compile perl, but it would have to be in a dll and it would also have to be wrapped.

Subject: Re: Official HL bot thread

Posted by [Nightma12](#) on Tue, 29 Aug 2006 19:14:29 GMT

but first of all i need to know how to create them in the first place lol

Subject: Re: Official HL bot thread
Posted by [AmunRa](#) on Tue, 29 Aug 2006 19:42:09 GMT
[View Forum Message](#) <> [Reply to Message](#)

all brenbot really is is perl scripts compacted into an executable file. Therefore you cannot make a dll out of perl.

Subject: Re: Official HL bot thread
Posted by [jnz](#) on Tue, 29 Aug 2006 19:57:12 GMT
[View Forum Message](#) <> [Reply to Message](#)

ok, i had a thought. i could create a command system where the bot parses the commands eg:

```
Trigger = !help  
Arguments = 0  
send_to_fds = ppage <player_id> commands are: !help
```

or

```
Trigger = !help  
Arguments = 1  
if <Argument 1> == help  
then send_to_fds = ppage <player_id> this will display all the commands  
else send_to_fds = ppage <player_id> command not found!
```

do you think this could be a good plugin routine?

Subject: Re: Official HL bot thread
Posted by [Nightma12](#) on Tue, 29 Aug 2006 21:03:30 GMT
[View Forum Message](#) <> [Reply to Message](#)

take a look at the NR plugin compatibilities:

www.aohost.co.uk/NRplugin.dll.txt

^^ that is a list of functions within NRplugin that can be used as hooks

and heres a list of functions within NRcore.dll that you are able to call from the plugin:

www.aohost.co.uk/NRcore.dll.txt

i also have an NRCommands.dll.txt and when you add a command into it it REALYL DOES feel as if it is really built into the bot... even the permission structure is easy to replicate with good documentation so the command even appears on the GUI....

thats basically the kind of thing that you would need to do to have a decent + powerful plugin system

i really doubt any of your current systems would be sufficiant enough to create powerful plugins, although your commands system has potential, it would need alot of upgrades as your basically writing your own language... its best to stick inside dlls and stick with a language well known (eg, C++)

Subject: Re: Official HL bot thread

[View Forum Message](#) <> [Reply to Message](#)

Quote:i see that there is a list of bad names, but what if someone actually has those names? like "gdi" or "nod" in fact there is a player called "nod" so he cannot join any server with NR running on it or am i just reading it wrong?

those names are their either coz of FDS exploits, or coz it fucks up the parseing on NR

if somebody join under the name NOD, it fucks up the game_info command, as renlog will output NOD: 23/32, but then the player could type things like 0/32 and NR would then think that nobody is on team NOD... so i make it auto-kick names that would screw something up

the server owner would either have to disable auto-kick malicious nicks on the NR Settings tab, or edit NRplugin.dll to remove the name

EDIT: some names are in there just so that someone dousnt join with a dodgey nickname too lol

Posted by [jnz](#) on Thu, 31 Aug 2006 23:50:18 GMT
[View Forum Message](#) <> [Reply to Message](#)

i am having a problem, i have asked this before but i cannot find the thread.

when you type "pinfo" into the fds with is the output eg:

player_id, player_name, score,

etc.

i already know this:

ID,player name,score,team,ping,ip;port,kbits,something,kills,deaths,cr edits,something

Subject: Re: Official HL bot thread
Posted by [Whitedragon](#) on Fri, 01 Sep 2006 00:04:04 GMT
[View Forum Message](#) <> [Reply to Message](#)

Quote:PINFO new console command to print information about players in the game.

Data is comma delimited and is printed in the following order:

Player ID

Player Name

Player Score

Player Team

Player Ping

Player IP

Player KB/s

Player Rank (position in the player list)

Player Kills

Player Deaths

Player Money

Player Kill/Death Ratio

its SSAOW 1.5 upgraded to scripts.dll 2.9.2, which has all those console commands on it
Thanks!!! i have been waiting for weeks for a version to come out with the latest scripts! thanks!

also i am using the fact that pinfo output information on all the players to my advantage. if i want a specific player the bot runs through all the lines until the correct player name or id is found then it puts all the information into a struct.

and oh yeah, this is bot a bug that is why why has "Start PINFO output" and "End PINFO output"

xptek wrote on Fri, 01 September 2006 03:46 I'd suggest offering a standalone version as well. I hate having to run installers on my servers.

this can be easily done.

Subject: Re: Official HL bot thread

[View Forum Message](#) <> [Reply to Message](#)

iv run into a stupid problem, here is alittle code:

```
cout << "player_name - " << player_name << endl;
string pID = get_player_id((char *)player_name.c_str());
if(pID == "NULL")
{
    return;
}
string id, playername;
splitstring(pID, ":", id, playername);
playerobj *obj;
obj = get_player_obj(atoi(id.c_str()));
cout << "ID = " << obj->Player_ID << " score = " << obj->Player_Score << endl;
```

```
if(obj == NULL)
{
    return;
}
```

but if i do this:

```
string pID = get_player_id((char *)player_name.c_str());
if(pID == "NULL")
{
    return;
}
string id, playername;
splitstring(pID, ":", id, playername);
playerobj *obj;
obj = get_player_obj(atoi(id.c_str()));
```

```
if(obj == NULL)
{
    return;
}
```

it wont work properly. why would a "cout" affect it?
this is in the main parse function btw.

Subject: Re: Official HL bot thread
Posted by [jnz](#) on Fri, 01 Sep 2006 11:44:58 GMT
[View Forum Message](#) <> [Reply to Message](#)

never mind found it: needs a "Sleep(50);" where "cout << player_name << endl;" was

Subject: Re: Official HL bot thread
Posted by [jnz](#) on Fri, 01 Sep 2006 11:56:14 GMT
[View Forum Message](#) <> [Reply to Message](#)

ok so i lied about the late release, this one is faster and more reliable, plus i have added 3 commands, !nextmap - what is the next map?

!thismap - what is this map?

!gameover - can only be used by the poeple in admins.txt.

and with the new parsing engine it is easier for me to add commands. it is also much faster than before.

if you want any commands added or have any suggestions please say!

Quote:and oh yeah, this is bot a bug that is why why has "Start PINFO output" and "End PINFO output"

and it often misses players out...

it loops thoug the player ID's, if id 1 is ingame, print id 1, if id is ingame print id 2, if id 3 i not ingame then quit loop

problem then is that if id 4 is also ingame.. it will skip them out

what is the point in !thismap???? lol..

and y dont u make it !next? so much easier

I have the same error message on a pc without VC 2005 installed. On this pc (with 2005) it works properly. I think there are some build options you need to change, I got this problem myself too once, but I'm unsure on how I fixed it. I know it had to do with the build options though. Might be the manifest settings.

right after realising a load of bugs, i have fixed mosgt of them, but i cant offer a release yet as help-linux.com is not down. but when the new domain come on i will have a server for it too.

todo:

a few more sounds;

i am going to improve the plugin.txt feature to include "if" statements;

read from logs instead so you dont need rlmon.

maby shortcut as in, you type into teamchat: bapp and it will translate that into "beacon at power plant";

mIRC support i will make it optional;

maby rengaard server, hopefully Crimson will let me. fingers crossed.

more commands for admins/mods

ladder (i have almost got this finished)

fix a memory leak, i am having trouble finding.

also i am re-writing code to make it easier to add commands, but i also need to add code so it is easier to get game info and add general game commands.

any suggestions you would like to make?

i have finally got somewhere! i have fixed the bot so 3.0 will be a stable release(hopefully).

features for 3.0

- 1: !makeadmin
- 2: !makemod
- 3: a set respond time (not configureable) so slow computers will work.
- 4: a nicely laid out log
- 5: irc support(mabe)
- 6: a whole load of shortcuts EG: iapc = Incoming APC!
- 7: user shortcuts EG: !makeshortcut afk I am Away from keyboard
this is so only *THIS* user can use this shortcut. 3 per person.
- 8: !qkick
- 9: !ban
- 9: !setnextmap

mabe some more.

almost, but i have alot to do yet. mIRC is not yet even though about, it should take about 2 weeks

to get ready for this release. i want to get it stable and running on low resources. at the moment it will use about 10MB on a big server and about 500k per person. i have already got all the radio command shortcuts from blackintells list working.

the reason it is at version 3 is because i started out (0.50) at praticly nothing, i then added commands, improved etc.
and now i am working on a few moderator and admin commands.

[View Forum Message](#) <> [Reply to Message](#)

Going back to what was being said in earlier versions about plugins: I doubt you will be able to turn perl plugins for BRenBot into .dll files, BUT since perl is mostly built on top of C++ you will probably be able to run the perl compiler as part of your own bot... although tbh I dont think it would work very well.

As for a universal plugin system: Not going to happen since each bot is in a different language... Although I am going to be adding a LOT more support for complex plugins in future versions of brenbot, including the ability to get specific lines from the gamelog / ssaow log.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Thu, 21 Sep 2006 23:25:01 GMT
[View Forum Message](#) <> [Reply to Message](#)

what i am doing for plugins is

- 1) a folder (later on) sometime that the dll's go. these dlls only contain one function.
 - 2) a folder (later on) where all the "parsed" plugins go, where you don't need to compile to run.
- these have been implimented but i need to make it so you can use multiple files.
-

Subject: Re: Official HL bot thread
Posted by [jnz](#) on Sat, 23 Sep 2006 23:08:22 GMT

Quote:1: !makeadmin : done
2: !makemod : done
3: a set respond time : done
4: a nicly laid out log : starting tonight
5: irc support(mabe) : 4.0
6: a whole load of shortcuts EG: iapc = Incomming APC! : done added extra feature, when you type the command a icon appear over your head
7:shortcuts EG: !makeshortcut : not done
8: !qkick : starting tonight
9: !ban : starting tonight
9: !setnextmap : not done

should be done in about 5 days

1: !makeadmin : done
2: !makemod : done
3: a set respond time : done
4: a nicly laid out log : almost finished
5: irc support(mabe) : 4.0
6: a whole load of shortcuts EG: iapc = Incomming APC! : done added extra feature, when you type the command a icon appear over your head
7:shortcuts EG: !makeshortcut : not done
8: !qkick : done
9: !ban : done
9: !setnextmap : not done

i have had it running now for 10 days and it has yet to crash so the next release will be a stuble release.

i am also considering a GUI but i dont think i will. because it uses too much resources if i do.

in 4.0 there will be: so far

!ipban

added extras on plugins.

IRC

and update system where if there is an update available it will download and update automaticly. (if allow_update in config.cfg is set to 1)

[View Forum Message](#) <> [Reply to Message](#)

sorry for no updates, been very busy.

i hope to have 3.0 ready for monday, i have found the bug that makes it crash and it shouldn't take more than 20 mins to fix, but i am going to test it for a few days to see if it still crashes.

planned for 4.0 (this is planned though may have to fix other things before i even think about this.)

1) !makeshortcut

2) irc support

3) !ipban

4)added extras on plugins.

5) update system where if there is an update available it will download and update automaticly. (if allow_update in config.cfg is set to 1)

so in 4.0 you wont need to re-download it will ask you instead

i am also in testing a feature that will stop repair hacks and pistol hacks.

help-linux wrote on Fri, 29 September 2006 16:07i am also in testing a feature that will stop repair

hacks and pistol hacks.

Don't forget that gamelog.txt only shows the weapon the player is currently HOLDING, so things like Timed / Prox C4 might look like massive damage hacks, when it's just the player happens to be holding their pistol when the C4 kills someone....

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Fri, 29 Sep 2006 16:00:43 GMT
[View Forum Message](#) <> [Reply to Message](#)

im not going to do it if someone kills a building. if it detects somthing smelly it will warn the server owner of the person doing it. basicly if someone takes 100 hp off with a pistol, then that is susposito and if it is a person it will be classed as red

Subject: Re: Official SBot Thread
Posted by [futura83](#) on Fri, 29 Sep 2006 16:28:31 GMT
[View Forum Message](#) <> [Reply to Message](#)

isn't there a way of logging which weapon was the one that destroyed it instead of which one the person is holding.

cos on APB, you can use the mine layer to mine, then jump in a harvester the get some cash. if someones tank dies cos of your mines, it looks like you killed it with an unarmed harvester

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Fri, 29 Sep 2006 16:42:15 GMT
[View Forum Message](#) <> [Reply to Message](#)

no, i dont think there is.

my bot will look at the time it takes to kill someone with a perticular wepon and how much if taken off HP wise. to put it more planly.

Subject: Re: Official SBot Thread
Posted by [StealthEye](#) on Fri, 29 Sep 2006 19:50:11 GMT
[View Forum Message](#) <> [Reply to Message](#)

afaik, it is impossible to detect which weapon actually caused the damage, as the client doesn't send it. I think you can check for C4 objects however, those are handled on the server. You could also log the damage and the weapons a player has picked up, and the ammo the player has. That would probably be a lot of work though.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Fri, 29 Sep 2006 20:20:05 GMT
[View Forum Message](#) <> [Reply to Message](#)

i thought that the weapon you see was what the killer's weapon when killed dies?

Subject: Re: Official SBot Thread
Posted by [danpaul88](#) on Fri, 29 Sep 2006 20:40:04 GMT
[View Forum Message](#) <> [Reply to Message](#)

Either in the SSAOW log or the gamelog it records when c4 is created / destroyed, so that might help decide if it was a damage hack or C4, but if (example) player A fired a rocket at player B and then switched to pistol before the rocket hit, the damage when the rocket hits will appear to be from a pistol... and there's no real way to distinguish between that and a damage hack

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Fri, 29 Sep 2006 20:42:13 GMT
[View Forum Message](#) <> [Reply to Message](#)

what i am going to do is, if he does it as in the same amount of damage from a pistol repeatedly. that will be treated as suspicious

I would not make it a GUI. The only thing you should be doing with a GUI here might be to make a extra config utility. If they are two separate programs it's ok, but I'd rather just keep it command line. Easier to develop, quicker to configure (assuming the config files are self explanatory).

Subject: Re: Official SBot Thread

Don't forget a GUI bot sucks up more resources than a CLI bot...

about 17Mb of RAM, SBot uses about 5Mb

the 17Mb used is worth it though, i would prefer to have a GUI that a console.

I hate GUIs for bots. You want processing power, not a pretty looking thing.

Subject: Re: Official SBot Thread

[View Forum Message](#) <> [Reply to Message](#)

Dead6re has a point there imo, although a GUI looks nice and is easy to maintain, you don't see it all that much. Atleast you dont want to see it all that much, since you prefferedly run it o a dedicated server.

Subject: Re: Official SBot Thread

[View Forum Message](#) <> [Reply to Message](#)

Why run GUI? I mean, ok, it takes a bit longer to setup your console based server, big whoop. That extra time gives you more processing power for your server, if you have GUI, quick setup, shit processing (not meaning to offend NR or anything). And once your done with the GUI based thing, you don't even look at it unless you need to change something! (can be easily done as wel in console mode)

Mak a GUI that sets up the command line config files. You only need to run it as a wizard to setup things.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Tue, 17 Oct 2006 14:32:06 GMT
[View Forum Message](#) <> [Reply to Message](#)

yeah, i see your point. and im sure i can do all the features in console as i would gui.

but Goztow has a good idea, use the gui to set up everything for the bot. it could also be useful for setting up the FDS.

I agree with the GUI installtion idea. But it can be a problem with servers that host allot of servers, which would cause installers rather unstable. Your pick.

Subject: Re: Official SBot Thread

[View Forum Message](#) <> [Reply to Message](#)

Like I said above, make the bot itself CLI. For the installation/configuration you should be able to at least configure the files manually, a GUI can be made to make it a little easier, but I wouldn't want to need to go through a wizard if I can just change a simple text config file and change something there by FTP.

Consoles can be quite easy too, in some cases easier than a GUI. I agree that the default fds console is rather bad, but I changed it for a reason. (<http://www.black-intel.net/images/console.gif>)

Yes, the separate input at the bottom also supports the arrow keys (up/down to use previously typed commands, left/right is obvious), tab completion, etc. F2 is mapped to the text "msg ", F3 will show game and player info. F5 will clear the screen. Also the size can be set in the config. Working with the console is 10 times easier .

Ok, i thought i would give an update on the Sbot.

First of all, im doing in GUI. like NR. Second of all, its going to be like BR - decreet, uses low memory. its also going to be like NR, very cusomisable and has lots of commands to offer. Your thinking, is he mad!? a GUI, well. i got a way of desroying the GUI and leaving the program running. so when you want to edit anything inGame yo just bring the GUI back and there you have it. when you want to leave it, just minimise it and its using low memory. At the moment, withough any code (just the GUI) it uses 1.5Mb of RAM minimized.

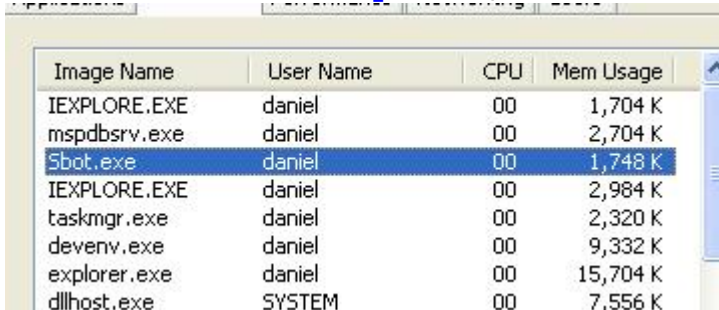

File Attachments

1) [Sbot-1.JPG](#), downloaded 3519 times

The screenshot shows two windows side-by-side. On the left is the Windows Task Manager, with the 'Processes' tab selected. The 'Sbot.exe' process is highlighted in blue, showing it is running under the user 'daniel' with 0% CPU usage and 15,268 K of memory usage. Other processes like IEXPLORE.EXE, mspdbsrv.exe, taskmgr.exe, devenv.exe, explorer.exe, dllhost.exe, msdtc.exe, wuauclt.exe, Generic.exe, VCDDaemon.exe, SOUNDMAN.EXE, and Application Launc... are also visible. On the right is the Sbot GUI, titled 'Sbot Version 0.0.1'. It has a menu bar with 'Banned People', 'Ladder', 'Moderators', and 'Admins'. Below the menu bar are buttons for 'Start Page', 'Game Output', 'Game Input', 'Sbot Settings', and 'Allowed Public'. A large green logo is on the left, and the text 'Sbot' is on the right. Below the logo, it says 'Smart Bot was written and'.

already, but im using SBot 3.0 atm

- 1) i wouldn't use Sbot 3.0 if i was you. buh meh if you do.
- 2) plugins for Sbot are going to be literally editing a scripts.dll.
- 3) supprizingly this new GUI version uses less RAM than the Console version.
- 4) you will be able to make your own commands. probably in a later version though

After IRC, im going to work on the LOG file output. could someone suggest a format / way they would like to be done? i was also thinking about RTF format as well

html output and ranks will definetly be in it. i am also going to make it support queries. i will make a php page to show you what i mean. basicly you go on the page, php will send a query to the Sbot. the Sbot will reply with the game info.

also, a log, that was in the original Sbot (console). that output all the internal state of the program. this way i can make a fix really fast if you have a crash. although, this file will get big. and will probably have to be deleted when it gets over about a Mb or so.

ladder output will also be available. you can also print the ladder to a webpage.

Fifaheld wrote on Tue, 30 January 2007 07:09 what can all the ladder system? rank, rankstats, top ingame?

the ranking system...commands like !rank for the rank, !rankstats for the rankstat (how many points, kills, death and many many more) and the !top command for top 3 or more

and do you need for the bot gamespy/ase and homepage support like wolspy or brenbot 1.43 build 27 (the newer gamespy protokol on the final from brenbot is not good) ask danpaul for the old gamespy code....

Update:

File Attachments

1) [Sbot-Music_Player.png](#), downloaded 1980 times

The screenshot shows the Sbot Version 0.0.1 Music Player interface. The title bar reads "Sbot Version 0.0.1". Below the title bar is a menu bar with the following items: Start Page, Game Output, Game Input, Sbot Settings, Allowed Public Commands, Allowed Admin Commands, Allowed Moderator Commands, Command, Banned People, Ladder, Moderators, Admins, IRC Output, Auto-Announce, In-Game Players, Music Player (highlighted), and About. Below the menu bar is a text box that says "This is where you can add, remove, and play music in your server". There is a checkbox labeled "Enable on startup" which is checked, and a button labeled "Music On". The main area is titled "Music Player" and contains two lists of music tracks. The left list has a scroll bar and contains: sakura battle theme, sneakattack, stopthemagain, 02-packing iron, 06-onyourfeet, 09-sneakattack, ammoclip, defunkt, mechmansrevenge, onyourfeet (highlighted), renegadejungle, sakura_dogfight, and sniper. The right list contains: 01-command&conquer, 05-moveit, moveit, stopthemagain, 02-packing iron, mechmansrevenge, renegadejungle, and onyourfeet. Between the lists are three buttons: "Add -->", "Remove <--", and "Skip to this". A "Sa" button is visible in the bottom right corner.

[View Forum Message](#) <> [Reply to Message](#)

Ladder: There is a ladder built in, I'm sure Dan is working on putting it in HTML format (or similar)

Game spy thing: It should be in there soon enough.

I think it uses edited scripts.dll etc, Not exactly sure on that one.

!Build doesn't cost money at the moment.

Wth am I answering questions? Because i'm a Beta tester and i'm helping him out with the build function.

[View Forum Message](#) <> [Reply to Message](#)

Update:

because of some crashes with some presets, im going to have to take out the custom build commands. for some reason some presets cause the server to crash. even though it goes through a check to see if it is valid or not.

instead, im going to hardcode as many structures that could be useful as i can. if you want any, now is the time to post.

im also starting on the buy command. like the build command, this has to be hardcoded as well.

Subject: Re: Official SBot Thread
Posted by [Dave Anderson](#) on Mon, 05 Feb 2007 00:28:12 GMT
[View Forum Message](#) <> [Reply to Message](#)

!build AGT
!build Obelisk

Those two commands would make for some interesting gameplay.

It would be pretty cool to have a !build command for each main structure as well so a team could replace destroyed ones. I don't know if that is possible, it would require you to delete the old destroyed ones from the map.

Possibly you could make it to where it would support !buy War Factor (for example), that way you could replace a structure if you have enough credits (example: 10,000 credits).

I don't know if the above two ideas are even possible, but it would be rather interesting.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Mon, 05 Feb 2007 00:45:03 GMT
[View Forum Message](#) <> [Reply to Message](#)

i have already tryed. its not possible to revive a broken building. it would require modification on the client.

Subject: Re: Official SBot Thread
Posted by [SeargentSarg](#) on Mon, 05 Feb 2007 01:59:09 GMT
[View Forum Message](#) <> [Reply to Message](#)

You can certainly not "add" random buildings while you are in game. Like !buy obelisk

But what you can do, is make it so you can create like a hut that has the functions of it.

Lets say !build factoryturret it would deploy a turret and then allot it to buy vechs out of it. (Would look weird, but just trying to be supportive)

Subject: Re: Official SBot Thread

[View Forum Message](#) <> [Reply to Message](#)

Tbh you con make a oblisk in level edit, Too bad it's indestructible.

Subject: Re: Official SBot Thread
Posted by [Dave Anderson](#) on Mon, 05 Feb 2007 05:06:53 GMT
[View Forum Message](#) <> [Reply to Message](#)

Is there something different about the characteristics of a Obelisk or AGT compared to (for example) a turret that disallows the placement/creation of that structure?

Subject: Re: Official SBot Thread
Posted by [Ryu](#) on Mon, 05 Feb 2007 06:56:55 GMT
[View Forum Message](#) <> [Reply to Message](#)

It's a ceiling gun, That fire's a oblisk beam.

Kinda cool, But indestructible, Unless you edited ofc.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Mon, 05 Feb 2007 08:20:15 GMT
[View Forum Message](#) <> [Reply to Message](#)

naa, ceiling guns are easy to destroy. ill have a look into that.

a building is a part of the map with a building controller attached to it. this is why you cannot spawn a new one. you can't respawn the building controller becuase you cannot m,ake the client think it is "alive" again.

a turret is a vehical. this is why you can spawn one.

Subject: Re: Official SBot Thread
Posted by [SeargentSarg](#) on Mon, 05 Feb 2007 20:39:14 GMT

Update:

The moderators and admins have to type their password each time they want to do an admin/moderator command. they don't use public, team or page the server. they have to privatemessage themselves with the command eg:

```
/roshambo !kicka h4x0r <mypassword>
```

it can ofc be in pretty much any order eg:
roshambo !kicka <mypassword> h4x0r

the !kicka command stands for "kick" "allow"

That password thing is a horrible idea. What you should do is make them have to type !identify <password> when they join to receive mod status.

For storing IPs, some kind of database would be best. I suggest SQLite.

Tried all the databases that VCS++ had. They all sucked. The reason i wanted to make the mod type their password was purly for security. I will make it a command.

I'd like to see an alias file, so that anyone can swap to your bot without having to learn the new command effects, IE:

CS' !kick is the same as BRenBot's !qkick

An alias system allowing you to swap from one bot to the other without having to learn things like that would be cool.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Tue, 13 Feb 2007 22:18:38 GMT

hmm; plugins, plugins, plugins. how should i do them?

- 1) they are in native C++
- 2) it can load as many as you like
- 3) it can get any of the information about the game
- 4) it can interact with scripts.dll directly.
- 5) it can interact with the console, eg input stuff to the console. or just display text on it.

ofcourse you get "chathook" "hosthook" "playerjoinhook" "playerleavehook" "gameoverhook"
"objecthook" "loadlevelhook"

i will be doing a crash course on how to make plugins when i fix up a few things.

logs:

will be written to "<startupfolder>\logs\"

chat logs will go into a folder called chat

death logs will go into a folder called death and so on. each file will be named eg:

SBChat_<date>.txt

and will look like:

[<time>] roshambo: hello world!

the death log will look like:

[<time>] roshambo killed bla with warhead <warhead> that hit for <damage>
so it could be
[10:10:10] h4x0r killed roshambo with warhead "bullet" that hit for 999999

the other logs will follow this sort of system.

gamemodding wrote on Fri, 02 March 2007 00:06Update:

Alias editor finished. The syntax for it is as follows:

<command> <alias>

eg:

!help !h

you cannot make an alias to an alias.

i forgot to move the tab before the SS was taken
You'll have to credit Brenbot for <alias> (if I follow your logic).

Posted by [Goztow](#) on Fri, 02 Mar 2007 08:46:56 GMT

[View Forum Message](#) <> [Reply to Message](#)

commands.xml uses <alias> already, you are taking it over and you stated before that you'd credit everyone you took commands from. Same should be done for this then, no?

Subject: Re: Official SBot Thread

Posted by [jnz](#) on Fri, 02 Mar 2007 11:19:49 GMT

[View Forum Message](#) <> [Reply to Message](#)

Sbot doesn't use xml.

you do your commands like:

!help !h

just put a space in between the alias and the actual command.

i made a "!test" command.

basically what this does is make a "Large_Blocker" and then teleports you onto it as well as the person you want to test. after 60 seconds, the "Large_Blocker" is destroyed. what do you think? good idea? or just plain ol' crap?

it makes the "Large_Blocker" 20 meters above where you are standing. thanks to Mero for telling me the preset for the "Large_Blocker"

Subject: Re: Official SBot Thread
Posted by [Tunaman](#) on Sun, 04 Mar 2007 05:17:04 GMT
[View Forum Message](#) <> [Reply to Message](#)

I think that you should make a command that lets the mod get rid of the "large_blocker" instead of it just blowing up after 60 seconds.

Subject: Re: Official SBot Thread

[View Forum Message](#) <> [Reply to Message](#)

bans now fully work. although, i got a bug that makes the FDS crash when a banned person tried to join the game. with a different username.

i will make a program to convert the brenbot ban list (the log version) into the Sbot ban system. since both databases work completely differently. (mine being the cheaper way(txt files ftw))

the serial hash fix should be good.

Features - Complete:

- !help
- !ahelp
- !sounds
- !build
- !buy
- !buyhelp
- !buildhelp
- !admins
- !moderators
- !makemod
- !makeadmin
- !kicka

!music
!nextmap
!killme
!removemod
!removeadmin
!myinfo
!gameover
!website
!ddef - destroy defence
!getinfo
!sethealth
!setarmour
!setmoney
!setweather
!ban
alias editor.

stores all ips / usernames in a txt file.
stores all admins / moderators in a txt file.
stores the music rotation in a txt file.
stores the autoannounce rotation in a txt file.
Seye server, if plugin is installed.
onjoin message.
editable ini file.
commands editor.
IRC output.
IRC client.
Game input - execute commands from the Sbot.
Game output - see the game in txt view.
change permissions needed for commands / disable any of them.
saying "boink" etc in chat will trigger a sound (if enabled)

Features - Still to do:

!vote
!yes
!no
!maketmpmod
!maketmpadmin
!removetmpmod
!removetmpadmin
!swearfilteron
!swearfilteroff
!setmusic
!rank
!getip
!getusednames

Aiming For Today:

i am aiming to get these commands working by the end of the day:

!maketmpmod
!maketmpadmin
!removetmpmod
!removetmpadmin
!swearfilteron
!swearfilteroff

the still to do list is getting smaller. i want to have a BETA this month, but as usual; something will crop up. hopyfuly the BETA testers wont have to report much, if anything at all.

[View Forum Message](#) <> [Reply to Message](#)

i have an idea. a few people have asked me to make a multi position system or "access levels". i wonder what you people would think to a new way of doing it.

i completly remove the admin, moderator and public command tabs. instead you have a "access level" tab. im this, you can name your own "access levels". you can then, change what commands are allowed for each "access level". hows that sound?

i could make a checkbox to say if this is a temp level. EG the user is stripped of the access level when they leave or the map ends.

The custom build command is back. i found what was makeing it crash. you can now make your own build commands

Sbot Status: Getting closer to the official BETA release.

That's from his signature.^
So I'm guessing it will probably be sometime soon, noone knows for sure.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Thu, 08 Mar 2007 08:10:38 GMT
[View Forum Message](#) <> [Reply to Message](#)

This will be a public bot. im wouldn't of made this thread otherwise. As soon as the testers can run it for more then 5 days with no problems. everything works. i wil release the BETA publicly.

if i released it now, i would have so many negative questions and comments. there is a bug atm if the FDS crashed i would get EG: "if the FDS crashes or shutdown. the Sbot starts spamming me with messages".

Subject: Re: Official SBot Thread
Posted by [Fifaheld](#) on Thu, 08 Mar 2007 08:51:24 GMT

nice...please can i test him

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Thu, 08 Mar 2007 17:42:33 GMT

[View Forum Message](#) <> [Reply to Message](#)

im not sure yet. i don't know how much testing its going to need. i finally finished the login / logout thing on the Access Levels. i made a video, im just uploading. it just shows what you can do with the panel.

the only mandatory access level you must have is Public. This stores all the commands the public can use.

if you create a access level say "Admin" then add a user to it. untill they login they have Public access level commands. when they do, they have their own set of commands. this means you can disable commands for admins that the public can use.

on the video, im sorry if i go a bit fast i had to retake tha a few times because i kept putting my actual password in

i hope you like it

EDIT: http://dansprojects.co.uk/Sbot_Login_Logout/ you will have to wait a long time for the video to load.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Fri, 09 Mar 2007 10:50:37 GMT

[View Forum Message](#) <> [Reply to Message](#)

Update:

Finished !donate

Changed the commands edittor. so you can use !playername! !accesslevel! and !commands!.

!playername! - will convert to thename of the player that called the command.

!accesslevel! - access level of this player. if it as a mod or admin, but they are logged out; it will display as Public.

!commands! - commands that this player has permission to use.

example for !help.

!accesslevel! commands are: !commands!

would translate to (if i was Admin and logged in)

Admin commands are: !help !ahelp !kick etc etc...

waiting time is a bad time

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Fri, 09 Mar 2007 12:09:49 GMT
[View Forum Message](#) <> [Reply to Message](#)

im sorry about the waiting time, i thought this project was going to be easier than i thought. alot of the time consuming is because i have to think of the logic on how to do something.

take the swear filter for example. the commands were easy. but at the moment i can't think how i can get the Sbot to "remeber" if someone has said something bad. actully detecting something bad is easy. i an use `if(Message->Contains("swear word"))`. i might have this feature finished today.

another thing is, i have been working on this for at least 3 hours a day. for a few months. sometimes i just don't want to do it. motivating myself to do this is becomming incresing harder.

Stuff still todo:

- !vote
- !swearfilteron
- !swearfilteroff
- !setmusic
- !rank
- !getip
- !getusednames

make admin / mod commands work in IRC.

I will have done today:

- !getip
- !getusednames
- !setmusic
- !swearfilteron }mabe
- !swearfilteroff }

Subject: Re: Official SBot Thread

[View Forum Message](#) <> [Reply to Message](#)

Update:

Ok, IRC. What i am going to do is, use the same engine that parses the players in game. However, if someone logs-in in-game; someone in IRC with the same name will have the commands. EG:

i am roshambo in-game.
someone in IRC is also called roshambo.

i !login in-game.
the person in IRC will have the same commands i have. so, in my server it will be an admin. i suggest that you make a password for your in-game nick on the IRC channel.

Now that i am dealing with access levels. it would be nice if someone could crash course me in how to make someone have an "@" or "~" prefixed the their name; and what they mean.

Sbot is coming along pretty well, I'm just creating the !vote command, cleaning up. finishing IRC script. Then sending off to BETA testers.

After the testers have cleaned up all of the bugs for me with the most powerful bug spray they have to offer, i will release publicly.

Don't expect it to come with loads of Uber features because it wont. its capable of directly communicating with scripts.dll, this makes it very powerful. Remember if there is a feature you wont in a next release just say, or talk to me on msn. Don't ask untill the first publicly available release is out

:/ 10x harder, meh.

just as a small update:
all the commands that work in-game now work in IRC. commands like !buy just return the error "You cannot use this command in IRC".

in IRC, you will have to !login (by paging the Sbot) before you can use your userlevel commands. It doesn't matter if you have logged in, in-game, you will still have to !login.

[View Forum Message](#) <> [Reply to Message](#)

I have been working on the IRC part for a bit and decided to implement another class into Sbot. This just stores information, for any programming nubs out there.

and so, i was messing around. in engine.h looking in The_Game-> and Commands-> to see what information about the game i could find. so i make this class.

```
ref class GameInfo
{
public:
String ^MapName;
double TimeRemaining;
int PlayerCount;
int NodPlayerCount;
int GDIPlayerCount;
double NodScore;
double GDIScore;
int MineLimit;
String ^SpawnCharNod;
String ^SpawnCharGDI;
int GDIProxyC4;
int NodProxyC4;
int GDIRemoteC4;
int NodRemoteC4;
int NodVehicleCount;
int GDIVehicleCount;
String ^ Is_Nod_Powered;
String ^ Is_GDI_Powered;
String ^ Can_Nod_Generate_Vehicles;
String ^ Can_GDI_Generate_Vehicles;
String ^ Can_Nod_Generate_Soliders;
String ^ Can_GDI_Generate_Soliders;
};
```

these are all the variables i have to play with. this whole class is updated every 5 seconds. if you know of anything else i should have here, say; and how to get the info from scripts.dll. for some reason i couldn't get the timed c4 count :/

this ^^ is !gameinfo (!gi) in IRC ^^

it automatically displays this every 5 minutes. im going to do a gameover one as well.

also to some non-programming nubs. i used String instead of bool because it was throwing an error when trying to convert. its was odd really :/

File Attachments

:/

how many ways is it possible to win on rene? for some reason:

The_Game()->WinType

goes up to 4 starting at 0. i found that:

0 == server shutdown
1 == dunno
2 == time limit
3 == base destruction
4 == beacon on ped.

so what the hell is #1 ???

Are you sure?

<YorkBot> [NR] Gameover, Game Was A Draw! With A Joint Score Of 0. The Next Map Will Be: C&C_City_Flying.mix...

Subject: Re: Official SBot Thread
Posted by [Tunaman](#) on Mon, 12 Mar 2007 05:18:26 GMT
[View Forum Message](#) <> [Reply to Message](#)

The NR bot reads it as a draw but it is not. It will have said GDI won that game, and anyways the likelihood of an actual draw is extremely (and I mean extremely) unlikely. This is because there are actually fractions of points that you can get that aren't shown because the points are only shown in integers.

Go ahead and load up a 1 v 1 LAN game and play as nod, and you'll see that your team score is below GDI's while you have 0 score. Now, go shoot the outside of a GDI building with your pistol and you'll see that the Nod score jumps over the GDI score while the score does not seem to change... This is because you got an extremely small fraction of a point when you shot the building with your pistol.

Thanks for the replys. On the picture, it shows Sbot displaying the "fraction". My Questions still remain.

- 1) How do i set up user levels in IRC?
 - 2) Some suggested voting styles.

Could #1 be the console command "win" ? Or could it be something that wasn't finished by Westwood, like team 0 (AKA Owned or Forgotten) winning?

Subject: Re: Official SBot Thread

[View Forum Message](#) <> [Reply to Message](#)

win destroys all the buildings in the game, so it triggers #3. fogive me for correcting you, 0 == Nod. 2 == Mutant team(This team was here for a purpose. if you look at one of the missions the mutents turn on you and the nod AI).

the format for gameover will be as follows:

The Game was won by <insert reason here EG: base destruction>.

<insert the same info that !gi does>

The most valuable player was: <insert a player> with <insert points>

This should be enough info i would say

[View Forum Message](#) <> [Reply to Message](#)

As far as I know the mutant team id is -3... Unless it was just made inconsistently and the mutant team has multiple ids.

The complete list as found in the LFDS code:

- 4: Spectator
- 3: Mutant
- 2: Neutral
- 1: Renegade
- 0: NOD
- 1: GDI

Update:

ok first of all. i added:

!playerlist - only works in IRC not checked by Access levels
!playerinfo - only works in IRC not checked by Access levels
!gameinfo - only works in IRC not checked by Access levels
!kill <playername>
!fds <command>

ofc, aliases work for all these commands. so:

!pl
!pi
!gi

when a building is killed it will say along with the last damage caused.
when a player is killed it will say along with what by and what gun / charater.
when a vehicle is bought it will say. although atm, it is duplicating the message. this is scripts.dll
and nothing can be done about it atm.
when the host says something, it will say in IRC.

i forgot to change the darkblue to light blue in the last one.

[View Forum Message](#) <> [Reply to Message](#)

i was very lucky i could. my computer wouldn't even start. so now, after a few hours trying. i have linux dual booted with it. this time, i should be able to fix anything wrong without starting windows. i also backed up MVS so i don't have to download again. the last post was from a my linux part. this post is on windows. my computer is on its way to a full recovery

btw, im sorry Sbot is taking so long. there is a crash on the FDS i must fix before i do anything else. Hence my other thread in the other products forum. once thats fixed i can send to BETA testers.

[View Forum Message](#) <> [Reply to Message](#)

Update:

Just finished an automatic updater. this will check for updates on startup and will automatically download a install them. if the Sbot is running when the update takes place then it will automatically restart. it will only download the latest update so you don't have to wait for it to update itself over loads of versions. it checks for updates ever half an hour.

The only thing is that it would take a while to get the mapping from the actual map to the image. meh, ill look into it.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Fri, 23 Mar 2007 23:30:30 GMT
[View Forum Message](#) <> [Reply to Message](#)

ok, im fixing bugs tonight. then tommorow, finishing the comands that need doing. i am also scraping the multithreaded system. this will make it faster. also, i (finally) found a way round the fact scripts.dll is sending data so fast to Sbot that it gets backed up in the buffer.

eg:
if the data was send slow it would look like:
gameinfo:bla:bla:bla
pinfo:somname:blabla
someotherinfo:blabla

when it sends it too fast it goes like:
gameinfo:bla:bla:blapinfo:somname:blablasomeotherinfo:blabla

this was causing some problems, because it was showing in chat etc. well now, i got it to append the ascii charater 1 to the end. so i can split the message up by this and parse each message seperatly.

other fixes needed:
start stop. it currently, now stops. whereas before it would just restart. in working on a "restart" so it can detect disconnects etc and automaticly restart.
im still working on the IRC, in-game access level.
also, there is a bug. i cannot fix it though. where sometimes, the damage shown is a little higher than the player actully hit for. this is nothing to worry about. the last damage shouldn't be used a foolproof way of detecting damage hacks.
i have used a makeshift way of stopping duplicate purchase messages. this just times when the last one was send and if another is send withing this time, it is disregaurded.
some more error checking on some of the commands is needed.
i need to finish !temp and !untemp. (these commands adds a specific use to an access level for a temperary amount of time,
i need to add more types of votes to !vote. ill need some suggestions for this.
add some more commands to allow for php(or any language) to connect to Sbot and get infomation about the game. so far its just gameinfo
add teamspeak support
add rengaurd support.
add the plugin support.

most of these shouldn't take too long. some others are going into later versions of Sbot. i need to make a "maps" tab, to change settings for certain maps (eg: minelimit, !rules).

The secret feature is going to be in Sbot, so ill tell you what it is. you will know that most ladders on servers go by score or mabe something else. however, it is always pretty primitive.
im planning on maing a ladder system that encourages all aspects of play (eg: repaing tanks, building. attacking buildings, kills etc). you ern ladder points for certain things like kills. at the end

of the game, the points will be tallied of what you did. then a ratio will be made. EG:
i went in-game and kill whored and did a few other things
the ratio would be 21:2:3:6 these numbers will get processed so you lose points for only doing one thing. im not sure yet on what the formulae will be. also, im scrapping the rank system. instead it will work like World of warcraft, where you have a level instead. you start at level 1, as you progress you get better things like health armour. ammo etc. to progress to level 2 you need # amount of points. to get to level 3 you need levels 2 points * 1.2 (about) EG:
level 2 - 100 points
level 3 - 120 points
level 4 - 144 points
level 5 - 178 points etc...
it will (like WoW) go up to a finite level. so people don't get invincible making it unfair for other players.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Sat, 24 Mar 2007 21:32:59 GMT
[View Forum Message](#) <> [Reply to Message](#)

the amount of points each level is worked out like:

points = $200 * (1.3^{(level-1)})$

you will get a gun at level 10. probably repair gun or something. at level 20 you get a shotgun at level 30 you get a weak rocket launcher at level 40 you get an extra bit of c4.

for each level you get your level amount of extra health and armour eg:

my level is 6, i get 6 more health and 6 more armour on any of my charaters.

i am also going to make commands to stop people from buying vehicles, charaters or powerups(beacon).

i still, as of yet, know how to get the vehicle factory build a vehicle on demand. i am going to make a commander for each team.

i have a point system as well.

the charaters are going to have "levels"

the free charaters are going to be level 1

the middle row will be level 2

and the heros will be level 3

the vehicles will start at level 4 and go up like so.

so, if a level 1 charater kills a level 5 vehicle they will get alot of points. if a level 5 vehicle kills a level 1 they get hardly any points.

Subject: Re: Official SBot Thread
Posted by [Dave Anderson](#) on Mon, 26 Mar 2007 18:52:18 GMT
[View Forum Message](#) <> [Reply to Message](#)

I believe it just uses a spawn script in scripts.dll, where you just specify where to spawn the object, and what object to spawn.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Mon, 26 Mar 2007 19:10:32 GMT
[View Forum Message](#) <> [Reply to Message](#)

at the moment i am working on a few things.

!temp - assign an access level to someone for a temperary amount of time.

!untemp - remove this access

The encryption between Sbot and SbotSS.dll
and another good feature. the Renguard server.

i would also like, its not too bad. some ideas on how i should design the GUI. i have been playing around a bit. im trying to compress the tabs as much as possible.

for spawning, i just send ask scripts.dll to spawn an object. specify the object preset, and a player id and any scripts i want attached to it. then scripts.dll does the rest.

Subject: Re: Official SBot Thread
Posted by [jnz](#) on Mon, 26 Mar 2007 22:14:13 GMT
[View Forum Message](#) <> [Reply to Message](#)

Right, finished the encryption. nearly. i actully finished stage one of it. This is where the commands are taken out of the code. if it recives a command that is not valid more than 15 times, the part that recives the data (hidden) will shutdown. stopping the Sbot from working. the second part which i am doing now, shouldn't take too long. is that there is a password going to be embedded in the encryption. the server and Sbot must be set to the right password. it will only allow one try before it will shutdown. if it recives one packet with the wrong password it goes.

The reason it is so strict is because if a hacker managed to shutdown Sbot (through IRC or

someother means) he would be able to completely ruin your server. it is also to stop flooding. the data transmitted back to Sbot will be unencrypted, unless people want this to be.

[View Forum Message](#) <> [Reply to Message](#)

Do you not listen to what I have told you on MSN? The SmartBot is property of Daniel Astbury of DCOM Productions, and only he has the right to put you on this "beta" tester list you speak of. As far as I know SeargentSarg is the only one testing the Smart Bot, and I don't even think he has the latest build of it.

If you want to find out more information, you need to talk to Daniel or myself. You're not going to

get any information in this forum, at least official information, especially since Daniel can't post here. The only place you should be getting information on the Smart Bot is here, here, or here.

Hey

Its not possible to download Sbot anymore.

As far as i know the Program is called YaRR and hasnt a GUI.

Here you can download YaRR

<http://www.dcomproductions.com/downloads/yarr/>

Es ist nicht möglich Sbot zu downloaden.

Soweit ich weiss heisst das Programm jetzt YaRR und hat kein Graphisches User Interface (Grafisches Bedienelement)

Hier kannst du YaRR downloaden

<http://www.dcomproductions.com/downloads/yarr/>

Pass mal mit deiner who/where verwechselung auf

Who ist NICHT Wo, sondern Wer

Where ist NICHT Wer, sondern Wo

in the end it was one big epic failure?

too bad, but yeah i think i speak for everyone we already got enough bots.

I prefer brenbot and cloudyserv.

Nothing against NR, but i like it clean.

I prefer brenbot and cloudyserv.
Nothing against NR, but i like it clean.

Comparison of Regulators (Private and Public) In terms of public regulators,

YaRR: Simple. Awesome.

BRenBot: Simple. Easy to manage. Great extensibility with plugins sytem. Best in terms of looks via IRC.

CloudyServ: Powerful, but cheesy. Easy to mod/etc. Yet because it's written in MSL it's newbie.

NightRegulator: With every subsequent version, something breaks., whether it was touched or not. Newbie as well because it's in VB6.

JB: Don't know enough about this, but the previews look horrible. It's written in MSL like CS so it's newbie.

In terms of private regulators,

DragonServ: Though it's written in MSL, it features powerful relay between the FDS and IRC - namely it's use of UDP packets being sent from the FDS containing in-game events.

St0rmServ: Written in Java, very powerful bot. Features some server-side additions to make it even more powerful. Doesn't quite beat DragonServ, but it's up there.

Earth Serv - looks quite good from irc dont know much about it

EKT Serv - Is private written on MSL edited cs

Pegasus Serv - Is public written on MSL edited cs

Bl's bot - Seen it in action once or twice. I don't usually play there as I've never seen/noticed players there. I've seen it in action one time when they hosted a scudstorm server back when they openly supported SS.

And, since you've brought up some of the less-known bots in my eyes...I'll mention my own bot.

NeoServ - Started as "NgodServ" and transformed into a better named bot "NeoServ". Project status is long but cancelled at this point. Started out as a MSL bot, started recoding it using C# but never got 'round to it

OnOeS (by n00bless) - Built of YaRR 0.5.0, Not much left of poor YaRR though. Features all the same stuff YaRR has, plus lots of bug fixes and extra features. Features include: Connection Broken to <player> (rather than showing player ID, it shows the name); Split minelimits (separate from reb00b and dead6re's dll); Self-Scripted vehicle binding code; Custom Built into Scripts.dll itself; Hex's improved veteran system; etc.

I'll see about typing up a nice webpage for this information.

What about EVA?

you can have a look at that at irc.xd-gaming.com
