As you can see,i cant get my BrenBot to connect to irc.  
any help will be appreciated.Its driving me crazy.I used the tutorial on Renegadewiki.Did  
everything they said.Still wont work

Try using 127.0.0.1 as IP instead of leaving it blanc.

the problem is nothing to do with ip's gozy, thats just for RenRem.

It is saying

connection to failed, with the two spaces around where the IRC address should go. Make sure you have set the IRC Server in brenbot.cfg

FYI:

You can fix that "Could not load scc\_ignore.txt" No such file error by renaming your lower case scc\_ignore.txt file to upper case SSC\_ignore.txt and that error will go away.

It's looking for that specific naming convention with the SCC in upper case.

I know it has nothing to due with your IRC connection issue but thought I would pass that bit of info on also.

Tony

Tony

actually ssc\_ignore is not bundled with brenbot, so he probably does not HAVE the file. Also the file name is not case sensitive

My Bad.  
I don't run Brenbot so I'll take your word.  
I was referring to the RenGuard Server Side Client  
which is case sensitive on the file name.

Sorry about the bad info.  
Tony

no problem

fyi, brenbot does not actually use the official ssc, it implements its own version of the ssc

---
