hi all !

yesterday i've got !forcerg when i was sniping, but now i can't play on the server DL Jellymap or something like it.

so i want to download renguard to play on this server, but when it's installed, i lauch it and it freeze ! and windows say the program doesn't answer"...

i don't know why so can you help me ?

i have already uninstalled and reinstalled renegade.

help me please

thanks all !

Can you give us a screenshot of when it happens?

Can you also tell us what operating system you use?

hi,

i am using Windows XP home, with intel pentium 4, 512 mb of ram, graphic card ATI radeon 9200 64mb

here is a screenshot i've found on this forum.

it's like my problem !

I have this problem also. Has anyone found a solution yet?
Firewalls are off, and I'm running Windows XP (Home edition)

Does it eventually give an error message when you let it like this for 3-5 minutes or does it just stay like this? It seems to me it might not be able to connect to the master serevr but why?

You guys didn't do dirty stuff with Renguard, things that could get you banned from it, did you?

did u do patch 1.037 before reinstalling renguard?

Did u install in a different directory?

patch 1.037 before reinstalling renguard????

erm no?

i didnt know u had to do that ^^

where do i get that and how do i reinstall it?

Caution: Make SURE you uninstall renguard using its uninstaller before patching to 1.037, or you will have a LOT of problems patching and reinstalling.
