1. Click disable core patch updates

2. Manually install the core patches if you still want them:

[http://www.thekoss2.org/article.php?menu=game_info&cat=\[REN\]Installing](http://www.thekoss2.org/article.php?menu=game_info&cat=[REN]Installing) (scroll down a bit in this guide for the manual download links)

Yes indd! The manual download is the exact same as the automated download, it just is a tad harder to install it .

I'd advise you to restart from 0, following the guide I posted about just before. Do not forget to install in a new directory, then Renegade, then patch 1.037, ... all in the correct order.

You have to install the 1.037 patch before the core patches. It's available at
ftp://ftp.westwood.com/pub/renegade/updates/Renegade_1037_English.exe

As I said: follow the guide and you'll be ok. It's all in there :-S.

The forum doesn't like [] in links.

change the address of the page then... or make a PHP page which redirects to it, problem solved.
Most people probably ignore your link because its not actually a link
