---

So I have set up a rengaurd server on my computer and i was able to use another login account to play on my own server. I did not however have the ability to kick, ban, or even lock my vehicles. So when someone i dont want on comes on i cannot kick him. I have heard about moderators is this what i need to become???? Or do i need to make a setting in my server options that will allow only me to kick and whatnot. Also i have been trying to make it so that i can go to the next level in the map list what is the command to do this???? Any info on this type of stuff would please me greatly.

You need a regulator, like brenbot. Here's a guide:

[http://www.thekoss2.org/article.php?menu=game\\_info&cat=\[REN\]Brenbot](http://www.thekoss2.org/article.php?menu=game_info&cat=[REN]Brenbot)

Ok...i have instaled Brenbot but what do i do now i didn't quite understand the help that you gave me i understand that i have to change system configuration files but i dont understand which ones, i have played with some of them but how do i enable them??? i run the brenbot icon and i think it tryies to update the rengaurd server. What kind of messages should i be getting when i run brenbot??? i just get a bunch of privlage messages saying i cannot authenticate myself.

Could i maybe get someone to take me through a step by step process that i could work with, or a tutorial that i can work with. I still cant get my !commands to work or anything but the crate to work.

ok im am slowly understanding this...lol. I have edited some files and they dont seem to be

---

working. I have edited the admin file to allow myself to be the only administrator. But i still cant use any of the commands. Also i have set up some moderators in the masters file but they cannot do anything either. i have set it up in the file like this. Is that an issue

Natester6

I also have a problem with commands such as the !bl. NONE of the people that log on can use them these commands also do not show up when i type "help" in the console window. i just get all of the commands that a server set up right through WOL can get. None of my commands show up with ! in front of it. Could this be one of my problems? i have installed SSAOW 1.5 and have moved the folders over.

I HOPE SOME OF MY DIAGNOSTICS CAN HELP I HAVE BEEN WORKING ON THIS ALL DAY!!!!

If breznbot doesn't work, it means you didn't take over the correct details from server.ini. Read the guide well, it specifies exactly what to do.

ok i did not run the mirc so i did not set up my nickname for the noobstories server but i have done that now and it worked. Sry bout that. I set up my bot name and everything in my brenbot configuration file and i ran brenbot. This is what i got after i got server welcome message

```
Identifying with Nickserv...
Joining IRC Channel...
IRC: Natester :+wx
Debug: Looking for c:\Westwood\renegadeFDS\Server\
Stopped gamelog!
```

IS this what i am supposed to get? I ran my server just after it verified my nickname then it came up with the Debug.....and whatnot

Prolly an error in the link to the renegade server directory in brenbot.cfg.

Ask yourself this question though: do you really need to thropw yet another server for renegade in the list?

As you don't seem to have a clue of what you're doing...
