Subject: How do I set these settings?
Posted by CarrierII on Mon, 12 Mar 2007 18:56:18 GMT

Topic.

How do I set the two lines in the DxDiag window that I've boxed in red?
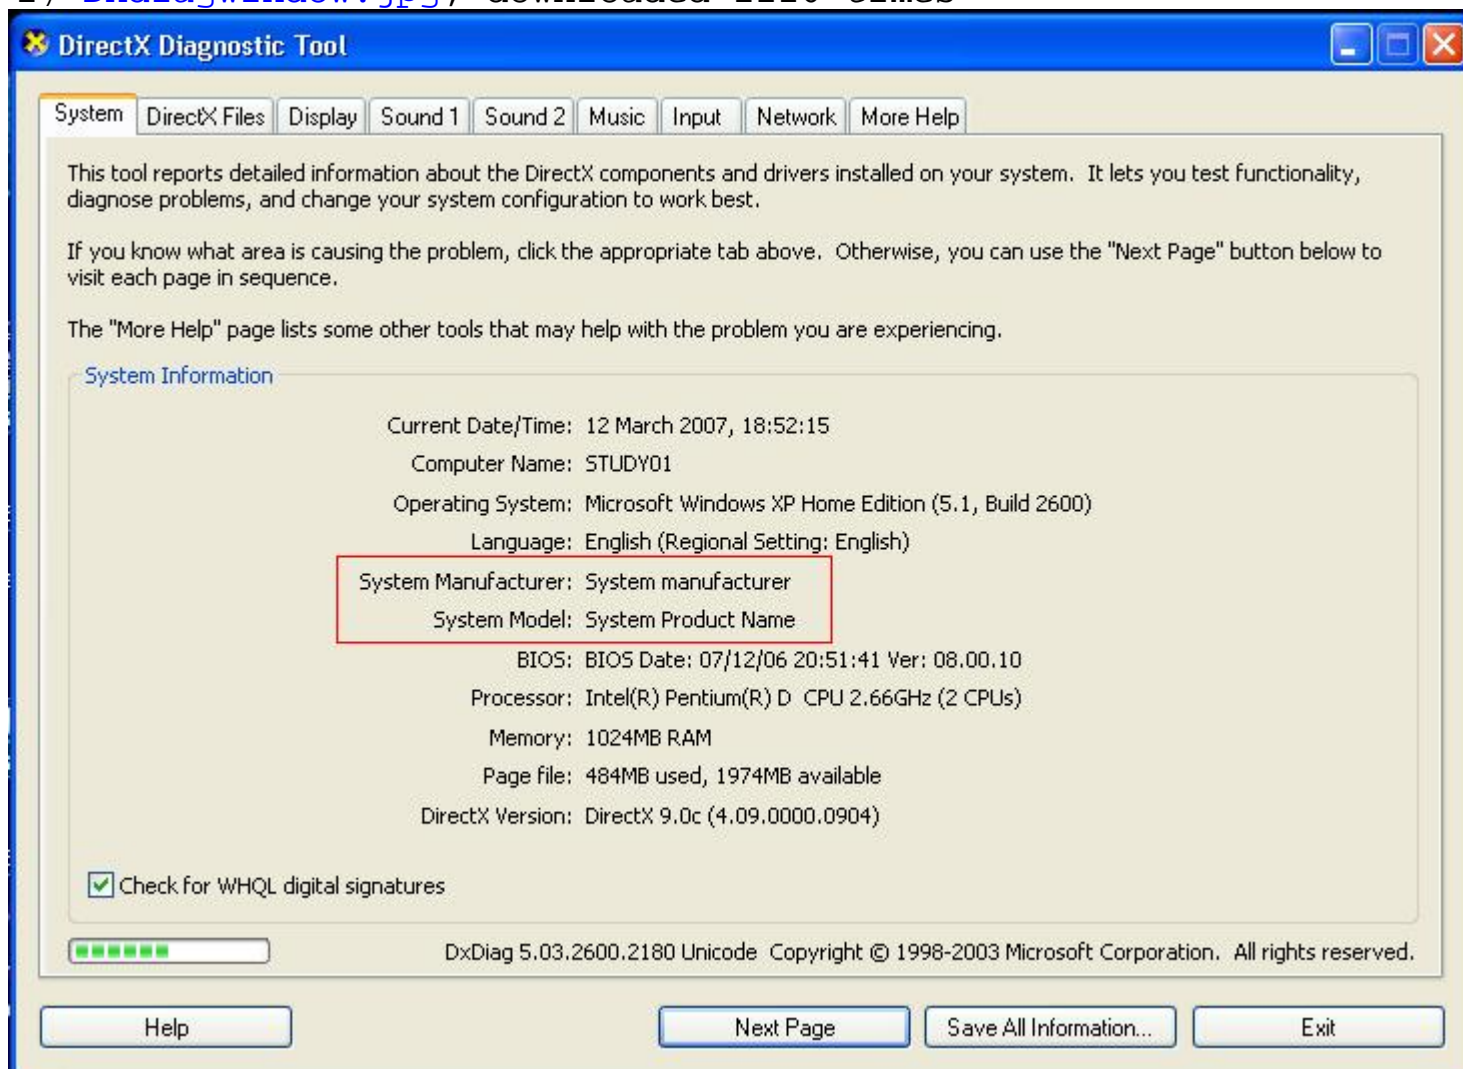

Anyone know?

Carrier

The real question is: 'why?'

Maybe he wants to send the logs to something, and he needs accurate information?

Those values will only be set when a manufacturer such as Dell or some other company sets them at installation time of Windows. (I'm not quite sure how they do it).

Otherwise they will generally say what yours says, or they will say "To Be Filled By O.E.M.".

I don't think so. I think it goes by the chipset of your motherboard.

Interesting. I guess there are duplicate sets of those settings meaning different things.

Those settings go by the PC's manufacturer. To set them I found imagine it would mean finding some keys in your registry. That is only a guess on my part though.

Becuase I want to. (I built this myself, hence the lack of it being filled in...)

I just wanted to put it there for a sense of acomplishment.
Thanks for the advice so far.

The information is read from your motherboards DMI, which is filled in by the manufacturer of the board, afaik you can't change it

Hex is correct. I'm not sure why yours didn't have any information though.

My Asus M2N-SLI has the same as shown in the screenshot, I guess it depends what settings
they feel like putting on each one

The ss I posted is my PC at work. My custom built rig at home might be the same as yours, blank.
I will check when I get home.

It could be simple= For gathering Information about the inside secrets of your computer, download Everest Ultimate here
http://www.lavalys.com

If you only want to enter some OEM info which will be shown in the "System properties" tab, copy the oeminfo.ini + oemlogo.bmp into %systemroot%/%windir%/system32 (Windows2000 and higher).
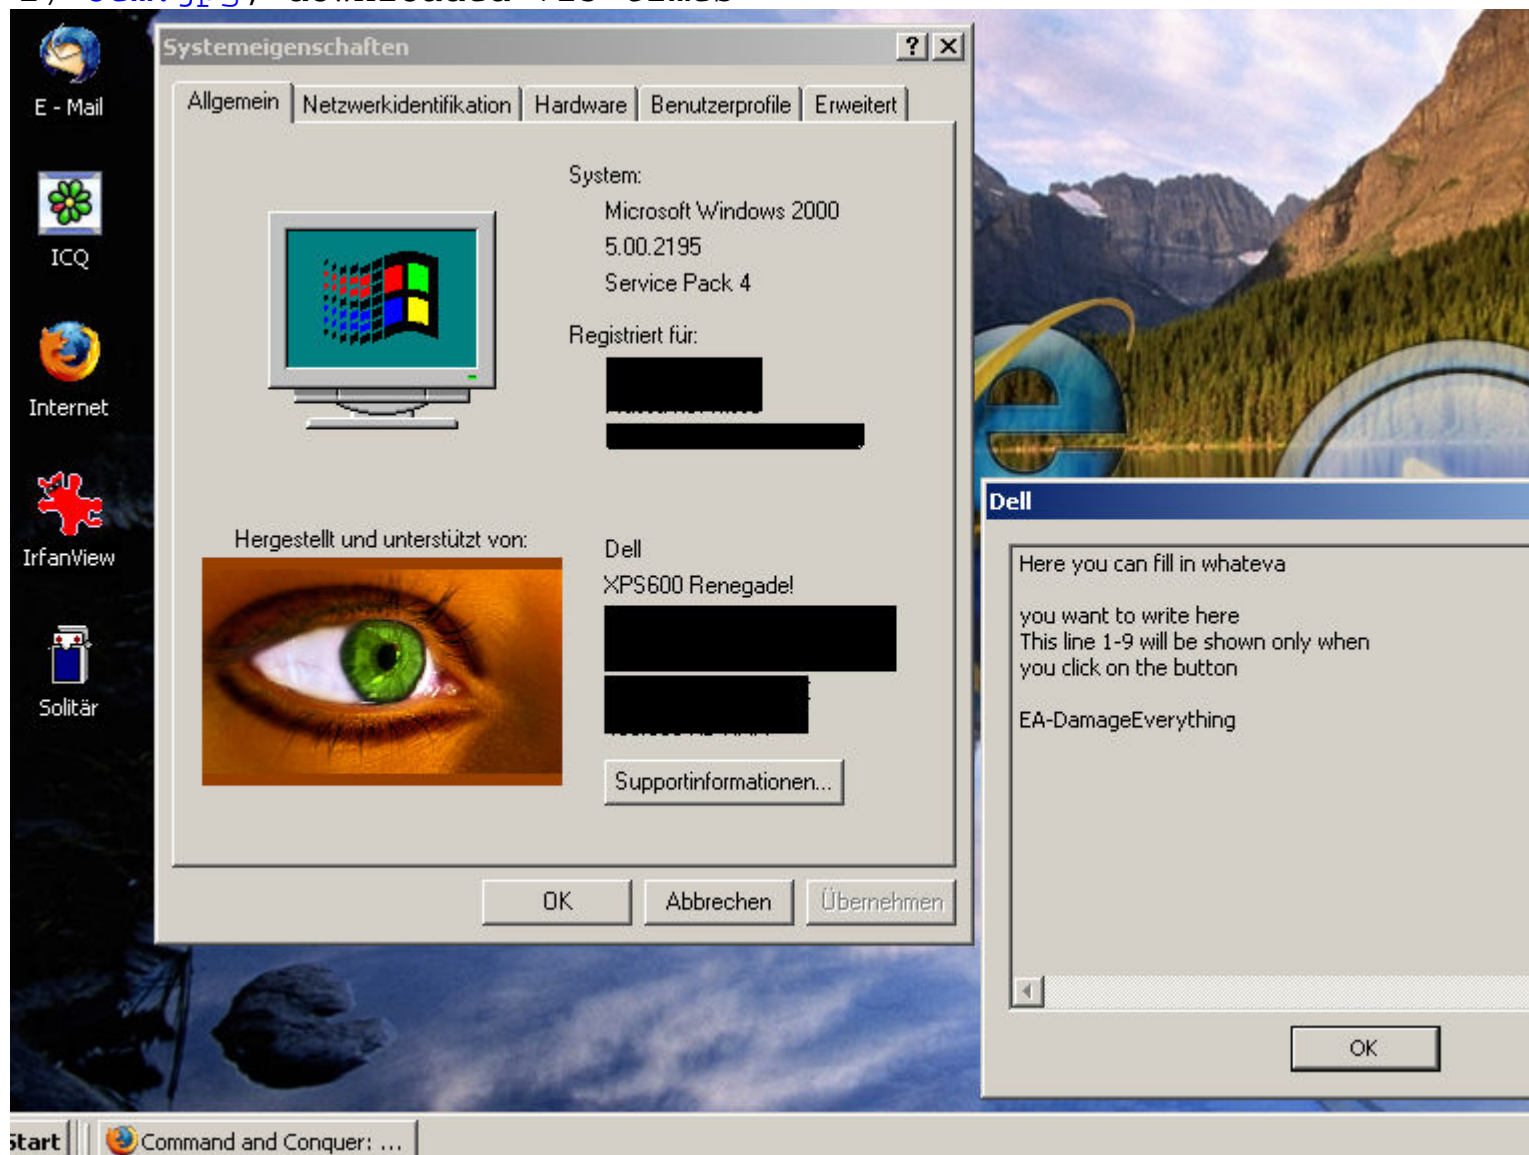

The two lines on dxdiag are "Manufacturer" + "Model". Take a look.
