The two events are probably not related.

As CarrierII said, these two events are probably not related. The installation of Visual Studio does not change any Windows configuration, registry settings, or any other instance related to Renegade or Renguard. It has to be something you have done other than the installation of Visual Studio.

Oh, I forgot about that. The annoying as hell JIT debugger. That could be the problem, since the JIT debugger literally catches any and every error within the operating system and can render certain programs "broken".

TGPDaddy, when Renguard crashes does the JIT debugger show up?
