[View Forum Message](#) <> [Reply to Message](#)

I hope to soon have an interview for Renegadecommunity.com with EALApredator, EA's C&C community manager. I had a first contact but obviously he is a very busy guy. I got a 'principle agreement' though.

I thought it would be useful that, for once, it's not me thinking of the questions but all our visitors can contribute! So you can post the questions you'd like to ask to EA here and I'll ask as many of them as possible during the interview.

Some rules though:

- This interview is about Renegade and its community. This means no questions about C&C 3 or other C&C-games, unless there a relevance towards Renegade
- Don't ask questions that you know he cannot answer or that could mean disrespect towards the interviewee. I will not retain those questions in the interview for obvious reasons
- Be detailed in your question. I want to be sure to understand the question before asking it
- Try to be a bit original
- Stay on-topic in this topic! Any flaming or off-topic posts will be removed from this topic.

This will be a one time event and opportunity for YOU to interact directly with EA's community manager. By all means, take it .

I'll close this topic the 15th of April, leaving plenty of time for all to leave their questions and/or remarks.

I'll add the already retained questions here:

Ask him what he honestly thinks about the three major Renegade mods, andweather or not they will recieve support from EA.

And Renegade 2007, the Renegade mod for UT3.

I imagine "support" meant that they wouldn't just ignore them or say to the makers "you can't make/release this".

Question:

Quote:

Are there any hopes of another C and C based FPS (Renegade 2?)

Subject: Re: What would you ask EA?

[View Forum Message](#) <> [Reply to Message](#)

Ask him if EA have any plans on releasing the Renegade Beta Assets, the Renegade 2 demo engine or the Renegade source code to major figureheads in the Renegade community.

Thanks Goztow.

If by "beta assets", you mean "assets from before renegade changed to the "less realistic" look" (e.g. back when vehicles for Nod had the TD cutscene style camo paint), I think that some of them have been released (a bunch of vehicles for example and some building stuff in the always.dat). They may not have the other stuff (the old guns, the old buildings/interiors etc) or may not have it in a usable/releasable format.

As for the renegade 2 demo engine, releasing the engine itself as a binary would be useless (its probably not in a releasable state in any case). Having the source code (to renegade, renegade 2 demo or whatever else they may have) would kick ass though

[View Forum Message](#) <> [Reply to Message](#)

Would it be possible for any current anti-cheat software to receive official support from EA? Not in terms of manpower (as they already have their own support teams). but in terms of having a seal of approval from the game publisher?

Follow up: If so, by what means could that support be obtained?

Just to point out, I'm not asking if any current projects WILL gain that support, but moreso if EA would be willing to give it to a current program if certain conditions are met (hence the reason for the follow up question)

Well, you say not in terms of manpower, but I disagree there, since our partnership with BHS I know that they do have either too less time/ppl to get the new rengaard done fast and properly. For BI it would be usefull if either the source was released, or we could talk to someone who knows more about the renegade engie and could give us more information on possible intresting things.

[Ontopic]

Could you ask why EA/Westwood never REALLY finished Renegade? I know that might be a bit offensive question, but from what I've seen @ seyes place, the renegade engine could do a lot more then it can now, just because loads of things are not/ cannot be used now. Also, I think that if Renegade was properly finished it would have gotten way more sales and more attention. I've heard from a lot of ppl that they had the feeling it could do way more then it did, and that it didn't have the "true" C&C feel, and no not because of it being an FPS.

Goztow, you can ask these questions for me:

What is EA's vision for the Command & Conquer series? Does EA see C&C as strictly RTS or see the possiblity of an FPS title that will connect with and extend the storyline?

What does Westwood's Renegade mean to EA? Does EA see it as a misadventure or a viable alternative option to further the series? Does EA see it as a distraction from the strictly RTS C&C games?

Has EA thought about the possibility of following up on Renegade with a new FPS that will reunite fans of Renegade AND create a new extended fanbase through innovative and exciting game features?

NOTE: I know there's a lot of questions...and (lol!) I am afraid I may have asked some dumb ones. But please feel free to only ask questions that make sense and fit with the theme of your interview.

I may have some more questions and I get back once I remember them.

Thank you very much for your work, Goztow!

Mail sent:

Dear Apoc,

I'm glad that you're back in-seat after the horrible moments you must have gone through after your abduction by Kane's forces.

While you were away, I had this conversation with Predator and I hope you can live up to his promise. I have taken the liberty of posting about this on the ren forums and have come up with a nice amount of questions. I'm sure not all can be answered but pick the ones that you can answer and maybe we can have an instant messenger interview then.

Here we go with our top 10:

1. What's your personal experience with Renegade? Did you play the game / do you still play it?
2. How was EA's experience with the game. Many say the game wasn't really finished and its potential wasn't fully used due to the corporate's policy at that time.
3. We know representatives of some of the three major mods (A path beyond, Reborn, Apocalypse rising) were invited at C&C3-meetings. What were your impressions/thoughts on these mods back then.
4. Would it be possible for any current software (ani-cheat?) / modification / website to receive official support from EA? Not in terms of manpower (as they already have their own support teams) but in terms of having a "seal of approval" from the game publisher? We know this has been done for services like Xwis (and clanwars.cc?).
Follow up: If so, by what means could that support be obtained?
Just to point out, I'm not asking if any current projects WILL gain that support, but moreso if EA would be willing to give it to a current program if certain conditions are met (hence the reason for the follow up question)
5. We have a lot of dedicated coders in the Renegade community who have a lot of knowledge about the Renegade engine. Could we talk to someone who knows more about the Renegade engine and could give us more information on possible interesting things.
6. What about that golden havoc statue and dead 6 poster (+ map) in C&C3? Was this just for fun

or if it had any 'real' meaning (IE. a hint of some sort).

7. What is EA's vision for the Command & Conquer series? Does EA see C&C as strictly RTS or see the possibility of an FPS title that will connect with and extend the storyline?

What does Westwood's Renegade mean to EA? Does EA see it as a misadventure or a viable alternative option to further the series? Does EA see it as a distraction from the strictly RTS C&C games?

Has EA thought about the possibility of following up on Renegade with a new FPS that will reunite fans of Renegade AND create a new extended fanbase through innovative and exciting game features?

What about the rumours of a sequel to Renegade on the Crysis Engine?

8. Could a release of Renegade Beta Assets (assets from before renegade changed to the "less realistic" look" (e.g. back when vehicles for Nod had the TD cutscene style camo paint)) be considered? Possibly for download on [ftp.westwood.com](ftp://ftp.westwood.com) (Renegadecommunity.com would definately hyperlink to it). We know there's a lot of it in the game's files already but some files were never released.

9. Is a release, under very strict conditions, of the Renegade source code to major figureheads in the Renegade community possible in a foreseeable future ?

10. Same question about access to the Renegade auto update function? A community generated, EA aprooved, official 1.038 Renegade patch could mean a big step for this game (solving bugs, anti cheat, auto map update, securing netcode, ...). Even if it would only include very small, invisible modifications that do not change the gameplay at all.

Oh and someone asked to tell you "the community says 'hi'".

I also wanted to give you an overview of some intresting projects the Renegade community has realised and/or is working at (this list is all but complete though):

1. Renegadecommunity.com

Mission: bringing back a portal for the official Renegade forums. Helping (new) players / modders / ... Concentrating information in one place.

We have choosen to use the original Renegade-website design for this cause but I recoded it for easy updating (now in PHP-coding with a mysql-backend)

1'. Renegadewiki.com

Seems straight to the point

2. Renguard. (renguard.com)

Mission: client anti cheat program.

Responsible: Black hand Studios.

I'm sure you have had a lot of information on this project from Crimson. A new public beta which blocks all current public bypasses is now available

3. Core patch 1 and 2

Mission: unofficial C&C Renegade update which fixes several bugs identified in the game.

4. BIATCH (BlackIntel Anti Cheat) www.black-intel.net

Mission: server side anti cheat

This server side anti cheat completes a function that the Renegade server should have had:

verifying damage the client sends to the server. It also includes protection against some other cheats like aimbot and purchase terminal cheats.

5. Total conversion modifications

Mission: convert Renegade into a whole new world

A path beyond: converts Renegade into Red Alert. <http://www.apathbeyond.com/>

Reborn: converts Renegade into Tiberian Sun. <http://www.cncreborn.planetcnc.gamespy.com/>

Apocalypse rising: converts Renegade into Red Alert 2. <http://www.apathbeyond.com/> (same website)

Renegade 2007: converts UT3 to Renegade. <http://www.renegade2007.com/>

6. Server regulators: Brenbot, Night regulator, Cloudy bot, ...

7. Custom scripts that provide many new features that mod and map makers can use + visual enhancements (use of directx 9, blooming, ...)

8. Linux FDS beta: a working FDS for WOL that runs on Linux

9. Implementing the in-game ranks again (BHS in collaboration with Xwis)

10. A ton of new maps and different small modifications

And so on. I probably forgot a lot of them, but at least it's a "starters list" .

I hope to hear from you soon.

Goztow.

Goztow wrote on Sun, 22 April 2007 07:30

1. What's your personal experience with Renegade? Did you play the game / do you still play it?

He has the huge Renegade banner draped over his cubicle wall which I have called dibs on. To the best of my knowledge, he has never played it.

Quote:2. How was EA's experience with the game. Many say the game wasn't really finished and its potential wasn't fully used due to the corporate's policy at that time.

He didn't work for EA at that time so he would most likely have to research this or just say he doesn't know...

Quote:3. We know representatives of some of the three major mods (A path beyond, Reborn, Apocalypse rising) were invited at C&C3-meetings. What were your impressions/thoughts on these mods back then.

If he said anything less than complimentary I would be surprised. The other developers at EA also viewed these presentations and I remember hearing a lot of "wow"s.

Quote:4. Would it be possible for any current software (ani-cheat?) / modification / website to receive official support from EA? Not in terms of manpower (as they already have their own support teams) but in terms of having a "seal of approval" from the game publisher? We know this has been done for services like Xwis (and clanwars.cc?).

Follow up: If so, by what means could that support be obtained?

Just to point out, I'm not asking if any current projects WILL gain that support, but moreso if EA would be willing to give it to a current program if certain conditions are met (hence the reason for the follow up question)

This was a stupid question to ask. Like oh, we haven't already thought of it and asked? Until anything is definite, he won't be saying anything publicly about it.

Quote:5. We have a lot of dedicated coders in the Renegade community who have a lot of knowledge about the Renegade engine. Could we talk to someone who knows more about the Renegade engine and could give us more information on possible interesting things.

Basically, everyone who knows anything about the Renegade engine isn't working for EA. I know that one of the level designers from Renegade is still there, and Greg Underwood is still there.

Quote:6. What about that golden havoc statue and dead 6 poster (+ map) in C&C3? Was this just for fun or if it had any 'real' meaning (IE. a hint of some sort).

I don't know.

Quote:7. What is EA's vision for the Command & Conquer series? Does EA see C&C as strictly RTS or see the possibility of an FPS title that will connect with and extend the storyline?

What does Westwood's Renegade mean to EA? Does EA see it as a misadventure or a viable alternative option to further the series? Does EA see it as a distraction from the strictly RTS C&C games?

Has EA thought about the possibility of following up on Renegade with a new FPS that will reunite fans of Renegade AND create a new extended fanbase through innovative and exciting game

features?

What about the rumours of a sequel to Renegade on the Crys Engine?

I don't know why this was all listed as 1 question. We asked this in person and the impression we got is that it's not out of the realm of possibility, but we wouldn't get to know anything until it was publicly announced.

Quote:8. Could a release of Renegade Beta Assets (assets from before renegade changed to the "less realistic" look" (e.g. back when vehicles for Nod had the TD cutscene style camo paint)) be considered? Possibly for download on ftp.westwood.com (Renegadecommunity.com would definately hyperlink to it).We know there's a lot of it in the game's files already but some files were never released.

See question 4.

Quote:9. Is a release, under very strict conditions, of the Renegade source code to major figureheads in the Renegade community possible in a forseeable future ?

See question 4.

Quote:10. Same question about access to the Renegade auto update function? A community generated, EA aprooved, official 1.038 Renegade patch could mean a big step for this game (solving bugs, anti cheat, auto map update, securing netcode, ...). Even if it would only include very small, invisible modifications that do not change the gameplay at all.

See question 4.

Quote:I also wanted to give you an overview of some intresting projects the Renegade community has realised and/or is working at (this list is all but complete though):

I've already told him all about those.

He didn't.

I already told you that most of your questions are unanswerable at this time, so it wouldn't be a huge stretch that he can't answer the interview yet.

Well, I guess at least a reply would have been nice

I never knew APOC as someone rude enough to not even write a reply saying he cannot answer my questions. I'll live with my naive hope.

It's not rudeness, he's just got a ridiculous workload.

[View Forum Message](#) <> [Reply to Message](#)

Probably the workload one. He's told me to contact him several times. I've worked my ass off making my emails to him as if they're essays, and he never gets back with a professional reply.

Well, when I was in LA with him (on the bus to go play laser tag), I told him that he is not allowed to complain about his job because anyone on the bus would have gladly taken it. He didn't believe me.

Anyone knowing his workload wouldn't believe it either.

Perhaps someone knowing a bit more about ren and stuff would not hexperience such high workload, since they know atleast a thing or 2 about it...

....

NO, but from what I heard, he doesn't know anything (well, very little anyway) about C&C games pre-generals, so...

And since Generals can't even count as a proper C&C game...

Crimson wrote on Thu, 03 May 2007 14:29Quote:4. Would it be possible for any current software (ani-cheat?) / modification / website to receive official support from EA? Not in terms of manpower (as they already have their own support teams) but in terms of having a "seal of approval" from the game publisher? We know this has been done for services like Xwis (and clanwars.cc?). Follow up: If so, by what means could that support be obtained? Just to point out, I'm not asking if any current projects WILL gain that support, but moreso if EA

would be willing to give it to a current program if certain conditions are met (hence the reason for the follow up question)

This was a stupid question to ask. Like oh, we haven't already thought of it and asked? Until anything is definite, he won't be saying anything publicly about it.

That was MY question.

I intentionally worded (or tried to word it) so that nothing currently in discussion had to be revealed. Which is why I was using words such as "Is it possible" and "How could it happen?".

Any updates? Also, if there's room for another question, ask him if EA would consider releasing the extended version of the opening movie (the overdubbed version used to be on cnc-source, but it's gone now; I still have it downloaded, though).

Probably after most of them have already been answered in one way or another...

Questions 1 and 3 have kind of been answered by the fact that Apoc was in the official APB server a while ago, and by the fact that APB appeared (extremely briefly) on cnc tv.
