Ok I'm aware the new RG is out. My problem occurs trying to install the old version and the new. I download renguard, install it, yada yada yada. When i try to open renegade i instantly get an error something about game.exe and it crashes everything after I choose dont send error report. I have tried reformatting my computer twice and reinstalling ren twice. I always get the same error. Keep in mind im not a total noob. I have used renguard in the past and it has always worked n_P...

What's the error? You updated Renegade before installing RenGuard, right?
