Subject: CloudyServ "FDS Not Running"

So I am trying to get this on my server, and I've managed servers before. In fact, I also have a server with BRenBot 1.5.

I've set everything up, but there's a little problem:
- When I use !gi, it shows the gameinfo and when I !msg it messages into the game correctly.
- But when I use !pl it says "FDS Not Running", same for some other commands.

What could I be doing wrong? If someone could help me on IRC with this, please PM me.

Are you using 2 copys of CloudyServ on your box? (Or pc..)

We had the same problem a few months ago, And then it started spitting out NR Commands..

We just done one thing.

Changed the remote admin port in server.ini then edited it on cloudyserv config files.

You need to replace a FDSTalk.dll, its because sometimes, CS .982 might spit out a invalid FDSTalk.dll in the Windows folder, and therefore, only CS .98 will work like that. But, thats as far as I know, one of my boxes are totally screwed like that, so I use .98

Hope this helps

Change your RemoteAdminPort, to a different port than you have on any other servers that you have on your box(pc), and also change your RemoteAdminPassword, make it different than all.
