I'm guessing this counts as support, so yeah. Scripts 3.2.2 won't work, which scrips#.dll file do I need? None are included in the download. I'm reinstalling renegade for the 17th time this month (no lie, and yes, that's ~3 times a day) because of scripts, internet, game, and renguard issues, and it's becoming irritating. Anyone know which scripts#.dll file I need, and, if possible, is able to provide it?

Either that, or what is the scripts version in RenGuard's CP2. That one never failed.

Nevermind, after looking around I found the non-renguard core patchers.
