"Unfortunately, there was a error loading scripts2.dll. Please report this bug!"

:/ I believe I installed it right. I followed the instructions as it said. Help?

dllload:

[scripts2.dll] Failed to load, error 1001. Recursion too deep; the stack overflowed.

Your scripts2.dll is wrong. Did you rename a scripts.dll from a previous version of jonwils scripts to scripts2.dll? If so thats why. scripts2.dll should be a renamed version of the scripts.dll that came with renegade 1.037.

I also found black-cell.net/clientscripts.zip inside has scripts2.dll which seems to work, except for the fact, once ingame, it freezes the whole screen at map loading, but the game does load you can hear "Unit ready" and walk around and fire shots, just not see them.....i'll try your scripts2.dll maybe that will fix the problem.

Sorry to double post, but it seems i dont see a edit button on my last post.

I used your scripts2.dll, copied it into the westwood/renegeade directory, THEN copied it into the new mod directory like it says to using level edit blah blah...game loads up fine, map loads, still locks up at the map loading screen, yet I hear sounds and can play....just no graphics, just sound.

Erk.

Use jonwil's scripts 2.9.2, it's very stable, if that fails, delete scripts.dll and rename the one I uploaded earlier to scripts.dll (In that order.)
