I wonder if the uber mappack installs scripts.

Do you have a scripts2.dll in your renegade directory?

Backup scripts.dll and rename scripts2.dll to scripts.dll . Chck if you still have the problem.

Note: by doing this, the maps will load slower and other new scripts-functions may not function. To restore, simply rename scripts.dll -> scripts2.dll and copy your backed up scripts.dll to your renegade folder.

If you had 3.0 or later, delete the d3d8.dll in your rene folder. The video will come back.

No go on that idea. I tried sys. restore and that was a no go also.
I will try next idea on the list.
