This guide is outdated, please use
https://www.renegadeforums.com/index.php?t=msg&th=41253&start=0& for instructions on how
to install renegade in 2024.

Reinstalling Renegade with the Core Patches is easy if you follow the correct order.

1. Backup all your fanmaps and skins in your renegade/data directory (usually
c:\westwood\renegade\data). Map files usually end with .mix. Simply move them to another
directory.

2. If you have Renguard installed, go to start -> control panel -> add/remove programs ->
Renguard -> uninstall

Go to start -> control panel -> add/remove programs -> C&C Renegade -> uninstall

3. Delete the renegade directory (usually c:\westwood\renegade)

4. Put your Renegade install disc in your cd-rom drive and install Renegade. Advice: install to a
different directory.

Note: if you run Windows Vista, you may need to install in admin mode. To do so, right-click the
setup.exe and click "run as administrator (as shown in this image).

If you want to, you can move your fanmaps and skins in the renegade/data directory after the
install.

5. Install the Renegade 1.037 patch. You can download it from
ftp://ftp.westwood.com/pub/renegade/updates/ or mirror

Note: If you have The First Decade, this is unneccesary.

6. Install the core patches manually.
CP2:   http://www.renegadeforums.com/index.php?t=msg&th=18892&start=0&rid=4
882
Cp1: http://download.renguard.com/standalone_cp1.zip (included in CP2 so no need to install it if
you installed CP2)

Note: if you're running Windows Vista, then you may also need to run the core patch install file(s)
in admin mode, as shown above.

Once core patch 2 is installed, you do not need to use your CD anymore as core patch 2 includes
a no-cd crack. An error will occur when you load the game but you can click on 'cancel' to skip to
the main menu .

7. Download and install scripts 3, latest stable version which you can download here. I recommend you to uncheck 'bloom' in the setup. If you have a rather old PC, also uncheck 'shaders'.Attention: if you get a black screen when starting Renegade after installing these scripts, this probably means you don't have directx 9 which you can download here
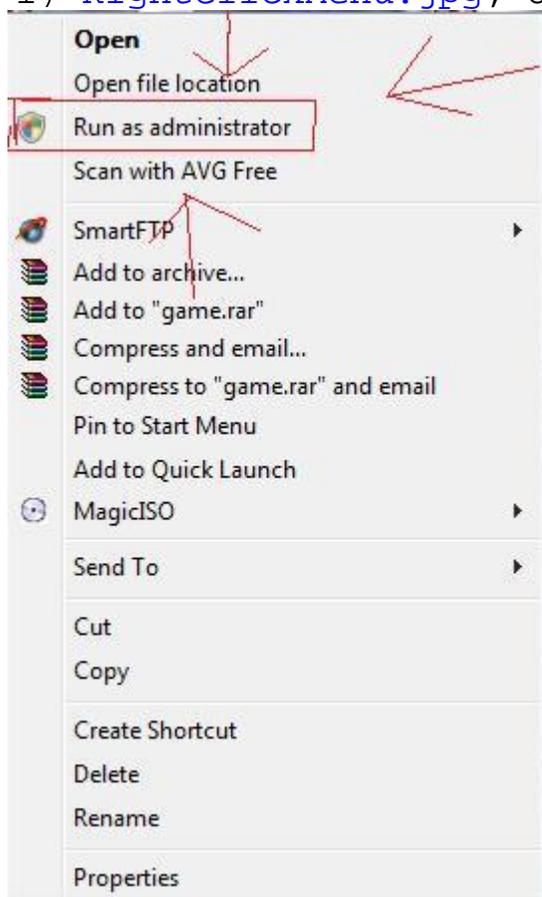

8. Go and play Renegade.

Note: if you're running Windows Vista, then you may also need to run the core patches in admin mode, as shown above.

You'll need to log in with your nick and password once, then restart Renegade (and Renguard) before Renguard will work. If you don't have a login yet, you can simply log in with the nickname of your choice and a password of exactly 8 letters or numbers. If it isn't taken, it will get registered to you. If it is taken, you will get an empty server list.

Delete this if it is unnecessary.

If you keep getting an error with Renguard when you try to install it (Maybe you deleted it manually) goto the Start Menu, Run, type in Regedit, press OK then browse to HKEY_CURRENT_USER/Software/ and then delete the renguard instance.

You should probably add somewhere the fact that TFD users do not need to get the 1.037 patch.

http://4camp.net/scripts341.exe for the installer.
  http://sourceforge.net/project/showfiles.php?group_id=51947&package_id=56768
&release_id=516476 for the zip archive.

Do you have directx9 installed? If not, scripts 3.x will cause a black screen and then closure. You can find directx9 here
