GMax has an IQ tester, if you fail it then it will refuse to work.

Gmaz? GMAZ! WHY GOD WHY!

Take your time and read what the program is trying to tell you. If you can't handle installing gmax
then I don't think you need to bother wasting your time attempting to use it.

The authors of GMAX have stopped support for the product, they no longer e-mail validation
codes, even if you subscribe.

A fix for this issue can be found here:
