Ok for reasons I don't know, i reinstalled renegade and downloaded the new renguard. now its messing up... when running the game on the internet, THERE IS NO NAMES IN THE LOBBY i can still talk to buddies but no game list.. so help there

also for renguard it has like a error for bandtest.dll or something and i have that but i dont know what it asks for.. also says bad always.dbs and when i take it out of the folder works fine, then in game when I am done loading the single player stuff, it closes the game. so i neeeeeeeeeeeeeeed heeellllppp

P.S. I reinstalled about 4 times already

So did you update the game to 1.037? That may be the reason.....I'm not sure, but I dont think removing files will help you.

Its easy!

Same thing happened to me 3 days ago after a reformat of hard drive. I re-created my account using my old password, logged on to that account, pressed connect, auto patching took over with CP2 and hey presto....everything worked as normal.

WHy dont you patch all your games....and btw, because you installed rengaurd which installed cp2, uninstall renegade and reinstall it, then install patch. then instalkl rengaurd.

Dont use scripts.dll 3.0+ come older PC's cant handle the bloom so it crashes ren, i have tons and tons of PC's in my house, my original PC can play renegade but will only work with scripts.dll 2.9.2 and anything over that it crashes.

Let me ask this did you install 1.037 patch? did you update rengaurd? if so, then everything must be working fine from here, and you said must be scripts.dll 3.0, well I think thats it, if your PC is older, then delete the file d3d8.dll from your directory and install these

black-intel.net/clientscripts.zip

That should make it work if you have a older PC.
