Due to computer problem I had to uninstall Renegade and Renguard. I followed the instructions here in re-installing both along with 1.037. I then downloaded the mappack from Gamerz0ne. I downloaded the link here for the patchall and patcher.exe, saved them both to my data folder, extracted the files and double clicked on patcher.exe. A black box popped up that said "Can't find patch file". I tried several times to uninstal and re-instal but the core patch isn't working. The patchall file folder contains a patchall.rtp and the patcher file contains patcher.exe and patcherw32.dll. Am I doing something wrong which wont allow me to get core patch 2 working properly?

Am unsure but it could be u need to put them in your renegade dir and not the data dir. Unsure, though.

And are you sure you downloaded the correct manual version of the patch, depending if you got cp1 already installed or not?
