Short and simple:

I have the model, I have the animation.

How do I make the animation take effect when I destroy the object?

#1
In LevelEdit, create a new explosion preset under Munition > Explosion and use your destruction animation.

#2
Edit your object's preset and set KilledExplosion to the explosion preset you just created.

Ok, I tried that, but when I destroyed the object in game, it just disappeared and there was no explosion or animation..

I checked the animation in W3D viewer, and it works fine..

I can't say what's wrong without further information. Please send the package to yrr<at>icefinch.net or post screenshots of every property page of the object's preset and the explosion's preset here.

Name

Phys

Settings

Depend

This is how I set it on the wall itself:

I simply temped it off of the humm-vee's explosion animation.

edit, here is a copy of the readme for the Nod Silo. The rest should use much the same settings.

```
File Attachments
1) Nod_Silo_Setup.txt, downloaded 160 times
```

Well, you see the animation is a separate file from the model itself. It isn't part of the model.

Yes you need to add the animation presets in LE under building agregates.
