Hey guys i found out how to make buildings work. If u press K it says My building is there and has full health ... but how can i kill the structure? i tryed to put powerplant working on M03 it says a powerplant is there but i cant target it and kill it.How can i make this builing targetable and destroyable?

By adding the building controller to the mesh. It needs to be touching the mesh and the mesh needs to have the correct prefix for the controller.

You can use scripts to kill a structure. For example:

- 1) Mission Objective is to kill Kane.
- 2) When Kane is killed, send a custom to a dave's arrow.
- 3) Upon reciept of custom at the dave's arrow, use "JFW_Destroy_Building_Custom" (something like that, I'll check it out when I am home - unless someone corrects me here)

It doesn't matter where it's placed as long as it's touching the mesh. The only ones that matter are the base defense controllers since the weapons fire from them.

The terrain mesh should have the prefix in them. They should also have call boxes which call for the interior mesh, PCT mesh, MCT mesh and damage emitters mesh. Unless you are creating 'fake buildings', these buildings won't work with the building controllers since they're implemented like vehicles.

If the situation is a 'fake buildings' type, then you could attach the script Mathk1ll mentioned to the vehicle to send the killing custom to the building controller ID, killing the building controller.

Make the car maker (CTRL + P while the controller is selected) and position it in the docking bay with the front of the car facing out (rotate the car using < and >).

And just so you know, Mission buildings have different controllers than Multi-player buildings, so use the *SPRef* controller. This is why when you shoot at the externals of buildings they don't destroy in the missions.

In mission maps, you MUST use the SP buildings controllers. You CANNOT use any other controllers or scripts to make these buildings work.

The term, 'Fake buildings' means making a vehicle with the mesh of the building. As this is still a vehicle the buildings can be destroyed just like destroying another vehicle. There is a script attached to the vehicle which will kill the building controller in question.

That was is good for buildings that don't do anything other than one thing, IE, base defenses or power plants. Buildings that perform acts more than supply power or attack enemies, like generating funds or creating vehicles will not perform their acts fully with 'fake buildings'. Sorry but this is the serverside limitation.
