Some times when i set up a Lan game i'll be messing with some of the console commands and all of a sudden my renegade closes and a window pops up labeled Renegade Mater server. It looks like a lan version of the FDS but im not sure how to get it back. You guys know how?

Uncheck "dedicaded server" in the host game options?

Yes, BRenBot requires an internet connection to connect to RenGuard. (I don't think that can be disabled.)
