Someone is going to come along to this topic and say i shouldn't run an FDS bla bla. Please don't. If you don't wnat to give me answers don't post.

I've seen videos on Renhelp that show ren starting up when the dos window for the FDS stops chugging away but Renegade doesnn't start for me. I can't start the the normal game while the FDS is running.

Thank you, the +multi works.

EDIT: Now it just restarts when I log on to XWIS

Obviously don't use the same nick for your server and client.

Replace ur server.dat with the one below and get rid of the +multi
I find just replacing the server.dat with this one works better than the multi thing and like goztow
said the nick for the server has to be different from the one u use to play on it.

http://www.blackintel.org/files/blackintel.server.dat.zip

Please do not hotlink to our files. The page contains useful information about this download, and
more.

Correct link:
www.blackintel.org/?page=downloads

 yea but  then u have to tell them what it is and ppl that aren't very good with finding stuff will ask
where is it, the main basic use i notice for that really is that it lets u run renegade and server at
same time without restarting server to run renegade.

and another thing u didn't give corret link> http://www.blackintel.org/?page=projects/downloads

Hmm, perhaps, but else we as blackintel have them complaining that it doesn't work, while they
didn't read the (important) notices.

And thanks for fixing the url. I guess I am not really used to our new site layout
