1. did u change the serial to your serial
2. did you pick a different nick that is not the same as the one you use every day
3. did you set it to wol or gsa mode?

that is all i can think of right now

wol won't allow you on if you have a modded objects.ddb, rename it to something else and modify ssgm.ini (if you have it installed)

Wouldn't with me. The renaming fixed it.
XWIS won't allow you on with a ddb in your data file, server or renegade, as its the most commonly used file for cheats. I've made single-player cheats with the objects.dbb its so easy
