well when i was in renegade i changed some bhs.dll options like vsync and antialiasing. Then when i restart renegade the error on this picture shows up. I am using windows vista btw.

Help plz :S

thnx alot.

Right.

Try re-installing scripts

Its still not working i cant get renegade to load.

Is there another way to change anti aliasing and vsync? cos i cant change it back through renegade

Maybe someone could upload their bhs.dll with default settings so i could try to put that one in my folder and see if it works?

I already got it fixed by installing older version 2.9.2 it works again.
But now there is no way to get my fps higher then 60? cos i cant put off vsync??

Putting off vsync is useless anyway. Your screen can't process more FPS than its refresh rate.
Putting vsyn off doesn't give you any advantage.

Are you sure about that? cos i have heard that people have fps like 150 and only have a monitor with a refresh rate of 60... :S

btw the first time i installed those scripts everything worked.
But when i changed the bhs.dll options and put off vsync and put on antialiasing and restart ren i got this error.
Now when i try to reinstall these scripts i keep getting this error,
Is there no way to fix this error??
Cos i cant run the latest scripts this way....

Your card makes anti-aliasing break. I can't find the registry entry that controls that, but when I do, I'll upload a set of settings that will turn it off for you. If anyone knows which key it is, just post.
