After Jwil never added my brothers killer bot scripts I set out to re-create similar results using what was already in Renegade...

So after failing with that I gave up on this but one of you might have a trick or two up your sleeve to finish this little bot demo.

Interesting. Might look into this when I get a chance.

did you make that little map? It's nice. I like the attention to detail, a lot of stuff that people make now a days lacks that.

What exactly do you want in it. And when you say what was already in renegade, does that mean without any of JW's scripts?

@Gray Yes its mine

@Bisen Just to improve the bots, these are all very standard and really boring. In my original they had a lot of features and such.

I do count JW scripts are standard renegade now, I mean not using external scripts that are not apart of jwil's release.

I am interested to know how you handled the VTOL AI, it's one type of AI I have struggled to get working, mostly because they seem to stop being able to 'see' enemies as soon as they get more than a meter or so above the ground.

There are many tricks to doing it, if you are having problems with it not being able to see enemies you should make sure that the vehicles sight arc is 360. If that doesn't work, use find nearest soldier scripts and stuff like that.
