Before you do that, why don't we consider making a reasonable post asking for help? Like this:

Topic - Renguard removes me from any game

Post - The base of the window says I have skins in my data folder.

To which tech support will say...

If it just says skins, you can ignore it, that will only block you from joining a pure mode server, which none of the public servers are. If it refuses to load Renguard at all, you'll probably find that the message in the base of the Renguard window (User feedback is such a good idea) that points to a specific file that Renguard doesn't approve of, why don't you take a SS of the error message(s) or just copy and paste that text up here, so I can tell you?

---

If it really only says you got skins and you are still "kicked", then it is not renguard kicking you but

---

your game crashing. Removing renguard will not help you at all then.

But hey, let's all just assume renguard sucks and advise to uninstall it without asking for more info!

I got problems with Renguard aswell, and as much as id love to uninstall it, some servers dont let you play on there unless u are running Renguard.. how can i bypass this check?.. Is there a way to trick the server into thinking you are running Renguard?

Yes, it's called CHEATING.

What problems do you have, we can fix ~95% of them.

MadRockz wrote on Sat, 23 February 2008 06:32Delet Renguard, Renguard sucks.

This is a RenGuard support forum, if you dont like RG, thats fine. But please dont spam the support forums with such info.

Dave Mason
THIS IS AN OUTRAGE!

and this has what to do with the topic? Please only reply if its relevent - thxs

If RG disconnects you because of "Skins found...", do this:

-Open your DATA dir
-delete all files with the ending w3d

Renguard allows you to use Skins (.dds / .tga), Sounds (.mp3 / .wav), Mods (.pkg) and some approved models (.w3d). Unfortunately I don't remember of a page or website where the approved models are listed at. You'll have to try...

RGapproved: Some pistols, some rifles made by GrimmNL and the Obeliskmodel from SP mode (Sanada released it AFAIR) for example.

Not approved models (because not sent in for a check or RGbanned): The aggmod, BigHeads/BigBeacon (basically all models from *censored by filter*), the DBZ-Soldiers and a bunch of rifle replacements I haven't checked yet. As well as other files I didn't find on the web during the last 4 years or they were kept private.

Renguard also blocks

-objects.ddb
-armor.ini
-modified game files (alwys.dat /always2.dat & always.dbs)

It doesn't suck, except some rare random crashes. Don't mess up your Renegade installation and everything should run fine.

Try a clean reinstall. Check the sticky in the "renegade client" subforum for "reinstalling in 9 steps".
