Hello,

has someone the php code for the server status like on n00bstories website:

Renegade

Map: Volcano

Time Left: 0.20.43

Nod: 21/50 15268 points

GDI: 19/50 9293 points

SFPS: 59

<http://new.brenbot.com/projectDetails.php?projectID=9&OS=w>

Allows BRenBot to upload server status to an FTP site in .txt format, which can then be parsed by your PHP code. Update interval is set in the XML file.

He told you that the update interval is set in the xml file. You must of over-looked that

I guess the plugin does not understand that the time might be 0 for a matathon server, but since you don't need to show the time for the marathon server you can just skip over that line with your php parsing.

<?php

```
$handle = fopen("serverstatus/fdsstatus.txt","r");  
while (!feof($handle)) {  
    $line = fgets($handle, 1024);
```

```
    $write = explode(" ", $line);
```

```
    $color = array("green", "green", "yellow", "yellow", "red", "red", "green", "green", "green");  
    $i = 0;
```

```

echo "<span style=\"color: $color[$i++]\">". $write['0'] . "</span><br>";
echo "<span style=\"color: $color[$i++]\">". $write['1'] . "</span>";
echo "<span style=\"color: $color[$i++]\">". $write['2'] . "</span>";
echo "<span style=\"color: $color[$i++]\">". $write['3'] . "</span>";
echo "<span style=\"color: $color[$i++]\">". $write['4'] . "</span>";
echo "<span style=\"color: $color[$i++]\">". $write['5'] . "</span>";
echo "<span style=\"color: $color[$i++]\">". $write['6'] . "</span>";
echo "<span style=\"color: $color[$i++]\">". $write['7'] . "</span>";
echo "<span style=\"color: $color[$i++]\">". $write['8'] . "</span>";
}
fclose ($handle);
?>

```

<http://www.eh-server.com/list.php> does not runing ... some idea

Use this instead;

```

<?php

$fileContent = file_get_contents ( "serverstatus/fdsstatus.txt" );
$write = explode ( "\n", $fileContent );

$color = array("green", "green", "yellow", "yellow", "red", "red", "green", "green", "green" );

for ( $i = 0; $i < 9; $i++ )
  echo "<span style=\"color: $color[$i]\">". $write[$i] . "</span><br>";
?>

```

The problem with your original code is your trying to write the entire thing for every line you read from the file, which ends up with the entire thing being written in green.
