Hello Again Team...I have installed Ren on vista....Gave it the update...Installed 1.037....Thats where I stayed for now to see what happens...I have put gameexe. and wwconfig in admin mode plus xp compatability.....

Now when I choose the advanced game listing..it tests bandwith...perfect...takes me to the log in screeen ok...I put a name and password and it goes to connecting to westwood mode like normal...But it does not connect..i get the UNABLE TO CONNECT TO Server....Operation timed out...message...

SO, does this have to do that I need to install CP1 and CP2 also....does it have anything to do with the log in name I am putting down....I gave it authorization in my firewall to always run....Any tipsall tips greatly appreciated I will try everything you recommenc team...thanks....donqj

I did the ping thing recommended to another user...

the cmd then enter ping c.xwis.net thing and i got

four counts of "Reply from 212.162.52.4: *stuff....it said in the read forum that something was not letting me connect...What could it be....do is still have to do with the install...that I have to do it completely?

The CPs are optional really you don't have to have them to make the game work they do speed it up and add some features though, try turning off all your firewalls completely and then try it.

Try this: Download the XCC WOL SERVER Connection Tool (

<http://strike-team.net/nuke/html/modules.php?op=modload&name=Downloads&file=index&req=viewdownload&cid=1> and run it. Click "Set (XWIS)", close the program, and try connecting again.

Imo this does not seem to be the computer's fault at all it's either a firewall blocking it or something is wrong with your isp.

Hahaha Yeah my bad for not clearing this up...Not changing it because of this....It has other problems.....Like not booting up!!! It is a new comp and I believe it should not be doing this ever....At least not when its new....All I did was install Vista and Norton Updates and bamm...dont boot up....And the game....but thee game should not be affecting this...

Sounds like a firewall problem to me (for the Renegade related problem).

2 problems found, Norton AV and vista, solution: uninstall Norton AV and install AVG and uninstall Vista and install XP

AVG is a really cool FREE anti-virus that updates frequently, and actually uninstalls itself on request (unlike Norton) - it also actually detects Viruses (Unlike Norton), correctly identifies safe files (Unlike Norton), and doesn't give you errors like the one in the picture (Unlike Norton)

World's best advert ever, TBH.
