Please help my fans. Unifam the Repairman here. I am receiving a message that says;"game has stopped working" right after the intro of the game starts. I have tried the compatability filters,unistalling and reinstalling renengade, and anything else I can think of.
Here are my stystem requirements in hopes that it helps: AMD Athlon(tm), 64 x 2 core processor 3800 + 2.00GHz
Memory has 894 MB.
I am confident that when we put our heads together we will solve this problem. Oh by the way...Vista is a piece of crap to work with.
Signing out, Unifam The Repairman

To me it looks like your problem could be you have such a low amount of ram, Vista requires at least 1GB(even then a computer would still run like crap) and about 2GB to run decently, get rid of Vista and install XP.

Did you try the Vista related proposed solution in the FAQ?

Vista is a piece of crap. If you don't want to uninstall a possible but drastic solution is to install a small Linux distro on a 1gb partition of your HD and run renegade under WINE.
