Hi all,

I hope that someone has tried this or knows a better way. I would like to play with my GF over lan against the computer AI. I know it is not tough to play the computer but she is just learning and we just wana play together so she can train up before we play against each other.

When we pick a lan game with AI the game will not let us play on the same team. Is there any way around this?

Thanks a bunch for taking the time to respond.

R

Just find and play in a Co-op server. There's nothing that's going to be easier than that.

Either join a co-op server or host one yourself:
http://ren.game-maps.net/index.php?action=file&id=562

It should work fine if you host a lan co-op server.

Or if you don't want that you could download the ai bot mappack
and host those maps on lan:
http://ren.game-maps.net/index.php?action=file&id=326
