I don't know anything about modeling... so I am assuming 4,000 polys makes it harder and less likely?

The more poly's, the harder it gets for the game to render it. If the model had tons of poly's it could lag Renegade. But I don't know how many that would take.

So is anyone willing to put this together? Not trying to be pushy, just want to know if I should search for something else.

.max *is* 3ds max..... it's just that files from a newer version of 3ds max won't open in any older version of 3ds max. I don't see why they couldn't include an option to save it in the format for an older version of 3ds max.....
