Urgent!

How to attach a new created Vertex-Point to an Edge of another Polygon?

Not to an vertex of the other polygon...

Goal is to have a new vertex point on that edge between the other vertexes.

(a blue point to a white line which point not belongs to)

ok, found it.

- 1) Divide the edge to create another fixed vertex
- 2) Weld with the created vertex

Should work...

That, or you could use math to divide the numbers in half, then place the vertex there, without having to make more polys.

You could simply use the tool that was designed for that purpose instead

Right-click the '3D snap toggle' button in your bottom toolbar

Tick the box labeled 'Edge'

Now close that window, and left-click the button so it is pressed down. To turn snap off, simply left-click the button again.
