Yea yea another file from my old ren modding stuff.

If you want more than one OBI/AGT or PP in your map and don't want to copy/rename everything for the duplicates (or set the collisions up again) just load these already finished duplicates into you gmax-scene. Further installation instructions are in the archive.

Can be also downloaded @ deathlink.ut-ccr.de of course . Damn I still have some stuff to upload but this is enough today.

Yes indeed) This is nothing for our skin- and replacment-geeks here. Something for mappers.

No. I know what you think but these duplicates work. If you shoot at AGT3, AGT 3 takes damage and not AGT1, AGT2 and AGT3 oder something crazy like that. You have 3 AGTs and 3 AGT buildingcontrollers placed on the map.

This is the common way to make duplicates. Check out Cairo for example.
