I watch southpark at blablablablablaba.com and family guy and American dad at blablablablablaba.com, and the vidoes always loaded up fine on both sites and play but lately my internet I guess is fucking up cuase it keeps freezing on the vidoes as if it was not buffering or loading in time, which is hard since i have a 10 mb download and this never happen before, it just keeps freezing and buffering as if i was using dialup just not that bad, i done disk cleanup,windows cleanup, disabled any internet services for programs I dont use, deleted all my IE junk files along with firefoxs junk files (that includes temp internet files) and unplugged both router and modem and plugged them back in order and yet no chance whats wrong with my internet? it downloads just as good as ever but cant buffer vidoes without freezing them litterly ever 1 second ot even half a second

It could also be the server that can't give you enough bandwith because it's overloaded.

Tbh imho you should be contacting your isp and asking them, there is little we would know about it.

Umm I guess I was just hoping maybe its something I could fix on my pc cause I never changed anything

heres something my internet speed test before my router was about 10 mb download and 1 upload now with my router and running few internet programs and few ocs hooked up dropped to 8.5 or higher mb down and 8.something kb up..

is that a bad drop in speed?

Sometimes when you're downloading/streaming/uploading a lot, your ISP might limit your connection speed.

Let's say it all depends... Your Internet speed will often be influenced by other people being connected. If you have cable, it'll be affected by the number of people in your street surfing / downloading at the same time. If you have dsl, it depends of the overbooking rate your ISP uses in the nearby central. Usually the cheaper ISP's have a bigger overbooking rate.
