I am creating a website to add all my stuff to, I have finished the design and got it on internet already. Only I want the downloads to have download counters.
I have been trying to add it for 10 hours already now but I can't get it to work :S Is there someone with PHP/website edit experience in here that could possibly help me with it?

Please contact me on markreijrink@hotmail.com if you think you can help me out   \

Thanks in advance

You know a bit of mysql? Add a field called "counter", when someone hits the "download" button, redirect him to a download page which checks what the field value is for that download at this moment, you set the variable + 1 and insert the new value in the field. Then you auto redirect to the real download page.

I don't really know much about SQL yet, here is a screenshot of when I got to my control panel and then click MySQL.

Then I created MySQL User

Then I got this screen. But I honestly don't know what to put there

phpMyAdmin

Server: localhost ▶ Database: a6661448_Di3Hard

Structure | **SQL** | **Search** | **Query** | **Export** | **Import** | **Operations**

a6661448_Di3Hard (0)
No tables found in database.

No tables found in database.

Create new table on database a6661448_Di3Hard

Name: counter   Number of fields:

Go

Open new phpMyAdmin window

For the record, his website is coded in HTML and Frontpage. thus it has no PHP interaction at all.

I found a good .PHP tool for the download counting now tho Also GrimmNL helped me a explaining stuff, thank you.

But I am the only one that can see it, because if you want to view it you have to enter a password ^

I just want it displayed on my website like it does here, and gamemaps. Only it seems impossible since I can't find it anywhere on GOOGLE

Here you see the screenshot, when I give more files a downloadcounter there will be just 1 list, which is also cool ofcourse, but that might be the best I could get

PHP Click Counter 1.2
-- Admin panel --

Add a new link | Refresh stats | LOGOUT

Link statistics

Total links: **1**
Total clicks: **1**
Average clicks: **1.0**
Maximum clicks: **1** (link ID **2**)

			ID	Clicks	Added	Web page	Graph
X	0	E	2	1	2009/01/27	GDI Real Tiberium Refinery Interrior	

TIP: For best performance you should remove links you don't use anymore. Button functions are explained below:

X - delete link
0 - reset number of clicks to 0
E - edit link

Add a link

Use this form to add a new link to track clicks on. Required fields are marked **bold**.

Start counting from:[1] `0`

Link name:[2]

Link URL:[3] `http://`

[1] CCount will start counting clicks from the number you choose (default: start counting from 0).
[2] Link name is a unique name for this link (max 40 chars including spaces). This name will be displayed as "Web page" in the statistics. If you don't choose a name the link URL will be displayed.
[3] URL of the link you want to count clicks on.

Add link

If all you need/want are downloads, try out paFailDB. It's very easy to setup. Not quite as easy to skin yourself - then again, this coming from someone who is design-challenged. *me*

I actually recoded paFailDB to use phpBB3's template system. Not that hard actually. I even made it use phpBB3's database structure(after failing for trying to get phpBB3 to read from two databases)
