---

I have a question in my CS assignment that's really got me stumped. I don't understand the point of BNF but they seem to think it's important. Can anyone explain it to me? I have a feeling there will be a question about it on the mid term coming up. Here's the question I have due tomorrow:

Quote: Define Assignment Statement in Backus-Naur Form. You may assume that expression is defined.

Assignment Statement: A statement that stores the value of an expression into a variable.
