Completed my first version of the Airstrike for Museum Mod...

- added GDI&NOD Airstrike (GDI with A-10 Aircraft; NOD with Old SU-27 Aircraft); with PT-Icon
- Airstrike is available via COM Center, as long as COM Center is online (1000 \$)
- it's called via a Beacon (= Airstrike Signal Flare), used Singleplayer Signal Flare for this
- I decided to make it a multiple purpose weapon:
- after placing a signal flare (imediatly), the strike will occour a few secons later (~ 7 seconds to detonation)
- with this, its a offensive or defensive weapon, e.g. against a tank attack
- the strike has the power of a nuke strike (2500 damage), but doubled its damage radius (30 meters scaled)
- the strike will damage ANY unit (GDI AND NOD), so use it with care
- the strike will NOT damage any buildings (except mounted vehicles [Guard Towers, Turrets, Gun Emplacements]) this would be to easy
- ATM I dont know a way to give points to the player for the damage caused by the strike

made it a combination out of the cinematic effects from level 1 a-10 airstrike plus nuke explosion (without nuke cinematics).

is a very large map, needs a vis. thats why the FPS is low.

of course, like any other explosion, the FPS will drop at the moment of explosion, if you are near it.

OMG, that looks awsome. Something like this should have been in normal Renegade TBH, like in the missions or even in Multiplayer.

Text announcements are missing, because I dont know a f... script for simple text messages (no, message_display_custom is bugged.).

You will need this files (x1g_effects is changed to have detonation at 0,0,0):

This mod is excellent, i always wanted A-10 strikes, gunboats, recons bikes, SSM launchers. thank you!

Just add those and the extra buildings like the shrine of nod and Adv. Comm. centres that control beacon purchases, helipads that air units are built from, repair bay, conyards that heal buildings, silos, sams etc, into a .mix type map and released with these goodies in it, then you will be playing c&c mode like the way it was supposed to be in all its glory.

Btw where do you get those skins for the med and mammoth tanks from?

If there would be an easy way to convert pgk->mix may be I would do it with some maps, but at this stage, no. It will stay a pgk or may be later a standalone:

Cross the fingers, may be, I will have a very BIG SURPRISE and a BIG PRESENT FOR YA to include in one of the next versions. OMG, i hope, all things run well! It will result in some levels/maps you all want to play

With that and with some help I'm looking for (good mappers & texture artists for some thing, e.g. good VIS systems) it has the potential to be a really HQ mod.

PS: hmm, die tank models are not skins, but w3d-models. In the readme I told all the sources/creators for the material I know.
