I have tried to install multiple times now, and that is successful. However, when I try to run the game the loading rectangle will pop up in the middle of the screen but Ren will not actually load up.

Im running XP and have full rights to install etc. Only prob is the loading of the game.

PC meets all min requirements.

Any help greatly appreciated.

Thanks in advance,

Dave.

Try updating Renegade to Renegade version 1.037 as Westwood fixed a couple of crashes to desktop before they disbanded.

That didnt work either.

I also tried getting RG to get no cd to bypass the loading but that failed. I got latest scripts and always file which RG said was corrupted and it still said scripts were corrupted, with getting latest 3.4.4 version.

No idea what to do!

Try one of the cracks here:
sorry, we don't allow cracks and that wouldn't have helped him out anyway. -Goz

You should:

- 1) install renegade
- 2) install 1.037 update
- 3) use crack

and next time let us see the girl on the background

I'd recommend a full reinstall following the sticky topic in this subforum which is a step by step guide.
