Hi all, since monday I have been having problems with my Renegade, I load up the game and then when I press ESC (escape) to skip the introduction the game crashes. I tried again a several times and it did not work, however I did just watch the introduction and got into a game server but as soon as I pressed a key on my keyboard, renegade crashed. I then re-installed Renegade and it was fine, but not anymore. I'm running Windows Vista if this helps. Does anyone know what I can do to stop this?

Thanks
