can you create like a crawl space in renegade where people have to crouch to enter I tried making one but it didn't work not sure if its possible. Look at the screenshot.

Question 2 is it possible to made a plane with 2 sided w3d options and both sides have projectile collision. I can only get the original side to have projectile collision and i don't want to make another side because it would look weird.

It wouldn't because backfaces are culled. As long as the surface normals point away from each other you'd only see one side, even if it's alpha-blended.
