Okay so I am having FPS problems with Renegade.

I will tell you what I have done so far:

*Install Renegade
*Applied 1037 patch
*Install Core Patch 2
*Install script 3.4.4 (I also tried it with the Bloom and Example shaders on aswell, there was no diffrence.)r

So ingame I get around 60 fps somethimes but mostly it hands around at 20-30 FPS.
I have already updated my dircet X and video card drivers.

Well what my concern is is that before I reinstalled XP on this same computer I was getting a constant 60 FPS, so what is wrong here?

I also am running the following settings.

800X600, 32 bit color depth, Multi-Texture Lightmaps, and Triliner

What is wrong here?

And these are the same settings you had before?well the truth is renegade gets a sucky FPS for all and it depends on how many people are in the server(well for me anyway).
