when i try to play renegade online the serverlist wont appear
im looged in as always
whats the problem

backup all the w3ds from your data folder in a folder on your desktop and try again.

Edit: lol back them up and delete them from data folder. Cut+paste is good.

you get a blank screen if your login and pass dont match. Try for example to login via GSA, just to be sure

If that would of happen then there will be message at the bottom saying "No servers found at this time" or something like that.
