As above, I've downloaded and installed rg several times but when I click on the Ren icon to start the game rg just doesn't show up.. I'm using Vista but running it in xp-sp2 mode. Any ideas?

If you're using any x64 version of Vista then RG won't work at all.

Go to "Start" --> Control Panel --> Select "Classic View" from the left hand side, then go to "System". It will say, under the heading system, System Type: and then either "32-bit operating system", or "64-bit operating system". If it's the second one, RG won't work at all, uninstall it and play without it.
