Did you try running Renegade from the "game.exe" in the game directory, rather than using the shortcut?

If this doesn't work, try installing core patch 2, as explained here:
http://www.renegadeforums.com/index.php?t=msg&th=24533&start=0&rid=4 882 . It will add a new exe file which may work.

Actually, I'd advise you to install the different patches as explained in that sticky, to be sure renegade starts using directx 9 instead of directx 8 (since you updated your video drivers).

The .exe is in the .zip. Open the zip file and copy the .exe and .dll in it to your ren dir. Same for
the patchall.rtp. Then run the exe.

theres no exe or dll in the patchall.zip file or the
other file ether in the patchall.zip has the patchall.rtp
in it and when u open it you view the code(this thing..
îv? ä?   0 Øâ ÐÙ 5?   T '   '   SOFTWARE\RenGuard)
that kind of stuff...and the other file which somehow got
lost somewhere was the same thing opn the zip folder and there
is the code thing

umm when i put them both in the folder(patcher.exe and patchget.dat) i pressed patcher.exe and the small black
screen poped up and sayed
"Cant find the patch"

You also need patchall.rtp in there. Patchall is the patch itself, patcher just installs it.

You did patch it to version 1.037 first, did you?

Here's the installation guide step by step:

Reinstall scripts 3.x (see the install guide). If it still doesn't work, do as suggested: reinstall
completely following the reinstall guide.

Did you give your serial out to someone? If it's invalid, you cannot play on westwood online but
you could play via gamespy.
