does anyone know if you can set player channel permissions through telnet (cprivs)? I am trying to make a modified Perl mod give register users auto voice. I know you can set normal privileges (ppriv) with (spriv).

cprivs

```
channeladmin = 1
operator     = 2
voice       = 4
auto_operator = 8
auto_voice  = 16
```

pprivs

```
serveradmin = 1
allowed_reg = 2
registered  = 4
sticky     = 16
```

More info about telnet
