I read all the faq and shit b/c i got the error 00000005 msg.  
Now after i tried a bunch of stuff, that msg is gone and i'm getting this one:

There was an error that prevented the game from being launched. check to make sure the game is installed properly and the path is correct.

I know its right because it works fine on gsa. i tried both with removing the (tm) and leaving it there, i just don't know whats up now and am confused :S

Any help would be appricated. TX

I would just suggest uninstalling it. Its outdated anyway

If you do want it, i would just reinstall completely as stated in the sticky. Maybe after the new clean install it will work

The only server that I know of to still force it is NS, so if you plan on playing there that would be the only logical reason to have it.
