I connect through a wireless internet and when the host I normally use is not broadcasting I connect to another one which is in my house (but slow). On my home service renguard says:

[14:01] Trying to connect to server #1...Failed!

[14:01] Trying to connect to server #2...

then:

Unable to initialize network, perhaps your firewall is incompatible with Renguard.

It is not a renguard install issue since once the other network broadcasts I have no trouble connecting. Is there a specific port renguard uses that I should open on the router? or any other suggestions would be appreciated.

Thank you.

FWIW I fixed it by accident trying to get the Xbox live to work for someone else. Apparently verizon sux for this stuff to fix it I set the router firewall setting to low. So I can get renegade but my connection sux hardcore so Im using the connection that was working anyways.
