I really liked the SCUDSTORM idea. I hope there will be people playing in a SCUDSTORM server soon.

I am going to download it later, when I have time to do so.

Odd, runs on my XP laptop :S

... Update

Aparently the problem is caused by having shaders run on Renegade. Untick the shaders option in BHS.dll options in Renegade and bob's your uncle. Working on fix for that.

As I've said to reborn if any of you are getting the same problem that it is an installer issue and will be fixed asap. I might just upload the contents of the installer itself for the time being. We also need community help to organize a game as I'm sure those of you who played it will find the new commander system great.

Did you turn off the shaders in Renegade?

Quote:Omar007 6hours 0mins ago says:

You are all right it doesnt work. I looked into it and its a simple solution (for those familiar with register keys)

First:

Start -> Run -> "regedit" (without "")

Then go to:

HKLM -> Software -> Westwood -> Renegade

There you find a key called 'Shaders'.

Double click it and set its value to 0.

SOLVED ^^

PS. I think the wrong/older DLL has been packed

press Q then can you build 1 veh, buy it.
Enter it press 1/2/3 then can you choose a building that you want to build, press again Q and you build it. Now your able to buy more veh/characters.

but dont buy a sniper, it will crash the game. Its bugged.

Oh I should mention, could you please post all bugs on <http://www.battlefordune.eu/forums> because otherwise we will have to go around to multiple forums and thread replies to see what bugs are actually there.

I will do one of those lists, yes, unless someone else wants to take over the organization.

SCUD Storm does work with WOL provided a valid Renegade serial was used when installing Renegade.

Can't seem to start a topic in your forums, so I'll just tell you here.

Buying a MIG seems to crash the game, I've only done this once so I'm not sure if it is the MIG or if it is a supply truck returning to dock (it crashed once when the supply truck was docking, haven't tested it again). It crashed after double clicking the MIG icon in the PT.

To clarify, during both crashes I had more than 1 supply truck (2, 3). I just tried crashing the game with a MIG but it didn't crash (which is good). This time I only had 1 supply truck.

It wouldn't start for me until I removed the shaders that installed with the game, I went though the reg first to try to disabled them but I don't even have a "shaders" listed under the ren folder, so oh well.

It does run with Ren's 3.4.4 shaders so I suppose I'll just use those.

Will this also be on SCUD storm WOL ?

I will do one of those lists, yes, unless someone else wants to take over the organization. SCUD Storm does work with WOL provided a valid Renegade serial was used when installing Renegade.

When this happens can our names be in colour orange and a title saying, USA veteran or china veteran?

The build system is pretty cool, took a few seconds to figure it out, I'd almost think it would be better to make mouse wheel scroll through the available buildings, then select with the three mouse buttons, then double click to place or something like that. That would make it so you didn't have to move your hands lol.

Everything didn't work right for me until I use the ren shaders to start the game, disabled the shaders in the bhs options menu, then put the Scud storm shaders back in. After that it all worked right.

It won't. Unfortunately at the moment we're really limited in what we can do with no

modelers/texturers, and with none applying to join the dev team only gameplay features can improve.

Awesome! I was a beta tester for a long while before the mod started slowing down. Also was retrofitting a few Regulators and plugins to work with the beta release.

BTW This doesnt work with wol without the shared internet components. and Skirmish does not work at all. even with tweaking the skirmish.ini

I installed Scud Storm but when I click the Training (multiplay) function it crashes to desktop. My Operating System is Windows XP Home, Video Card is ATI RADEON 7000, Sound Card Is DirectX 9, RAM 1GB, and Processing Speed is 1.99 GHz. What's wrong?

[View Forum Message](#) <> [Reply to Message](#)

There is a server running for this now, you need to have a working WOL though. You also may have to change the serial in HKLM->FinalWar->ScudStrm to a valid one

I cant really do anything in it, It was working for about 2 minutes then "Q" stopped working, the number commands stopped working, I was able to run around but even after I had everything built I couldn't do anything else.

so I restarted, I purchased my dozer, tried to build a power plant, and "Q" stopped working again.
